#### 250-RICR-150-05-1

#### TITLE 250 - DEPARTMENT OF ENVIRONMENTAL MANAGEMENT

#### **CHAPTER 150 – WATER RESOURCES**

**SUBCHAPTER 05 – WATER QUALITY** 

PART 1 – Water Quality Regulations

# 1.1 Purpose

It is the purpose of these regulations to establish water quality standards for the State's surface waters. These standards are intended to restore, preserve and enhance the physical, chemical and biological integrity of the waters of the State, to maintain existing water uses and to serve the purposes of the Clean Water Act and R.I. Gen. Laws Chapter 46-12. These standards provide for the protection of the surface waters from pollutants so that the waters shall, where attainable, be fishable and swimmable, be available for all designated uses, taking into consideration their use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and also taking into consideration their use and value for navigation, and thus assure protection of the public health, safety, welfare, a healthy economy and the environment.

# 1.2 Legal Authority

The authority for these regulations is vested in the Director by R.I. Gen. Laws Chapters 46-12, 42-17.1, and 42-17.6. These rules and regulations are further promulgated pursuant to the requirements and provisions of all chapters of the State of Rhode Island General Laws relating to the duties and responsibilities of the Director for the waters of the State, and in accordance with the requirements of R.I. Gen. Laws Chapter 42-35.

# 1.3 Incorporated Materials

- A. These regulations hereby adopt and incorporate 40 C.F.R. § 136 (2018) by reference, not including any further editions or amendments thereof and only to the extent that the provisions therein are not inconsistent with these regulations.
- B. These regulations hereby adopt and incorporate the "Methods for Measuring the Toxicity and Bioaccumulation of Sediment-associated Contaminants with Freshwater Invertebrates", Second Edition, March 2000, EPA/600/R-99/064 by reference, not including any further editions or amendments thereof and only to the extent that the provisions therein are not inconsistent with these regulations.

- C. These regulations hereby adopt and incorporate 40 C.F.R. § 404(b)(1) (2018) by reference, not including any further editions or amendments thereof and only to the extent that the provisions therein are not inconsistent with these regulations.
- D. These regulations hereby adopt and incorporate the "Assessing Human Health Risk from Chemically-Contaminated Fish and Shellfish", September 1989, EPA/503/8-89-002 by reference, not including any further editions or amendments thereof and only to the extent that the provisions therein are not inconsistent with these regulations.
- E. These regulations hereby adopt and incorporate the "Water Quality Criteria Documents; Availability," Appendix C "Guidelines and Methodology used in Preparation of Health Effect Assessment Chapters of the Consent Decree Water Criteria Documents," November 28, 1980, 45 FR 79347 by reference, not including any further editions or amendments thereof and only to the extent that the provisions therein are not inconsistent with these regulations.
- F. These regulations hereby adopt and incorporate 40 C.F.R. § 131.12(a)(1) (2018) by reference, not including any further editions or amendments thereof and only to the extent that the provisions therein are not inconsistent with these regulations.
- G. These regulations hereby adopt and incorporate 40 C.F.R. § 423 (2018) by reference, not including any further editions or amendments thereof and only to the extent that the provisions therein are not inconsistent with these regulations.
- H. These regulations hereby adopt and incorporate 40 C.F.R. § 116.4 (2018) by reference, not including any further editions or amendments thereof and only to the extent that the provisions therein are not inconsistent with these regulations.

### 1.4 Definitions

- A. For the purposes of these regulations, the following terms shall have the following meanings:
  - 1. "Acute toxicity" means lethal or sublethal severe adverse effect(s) to an organism when exposed to a toxic pollutant(s) for a relatively short period of time. In aquatic toxicity tests, an effect observed in 96 hours or less is typically considered acute.
  - 2. "Administrator" means the administrator of the United States
    Environmental Protection Agency or any subordinate or subordinates to
    whom the Administrator delegates the powers and duties vested in that
    office.
  - 3. "Applicable standards and limitations" means all state, interstate and federal standards and limitations to which a discharge or activity is subject

- under the Clean Water Act Federal Water Pollution Control Act, 33 U.S.C. § 1251 *et seq.* or any State Acts
- 4. "Applicant" means a person who applies for any approvals for any discharge, activities, projects, or facilities in accordance with the requirements of these regulations.
- 5. "Application" means all forms, documents, and other information required by the Department to apply for a permit, order, certificate, or other approval from the Department in accordance with the requirements of these regulations.
- 6. "Approval" means an authorization, Order of Approval, permit, certification, license or equivalent determination issued pursuant to regulations promulgated by the Department.
- 7. "Aquaculture facility" means a defined managed water area or facility for the maintenance or production of harvestable freshwater, estuarine or marine plants and/or animals. Defined managed water area as used in this definition, means the portions of the waters of the state within which the permittee or permit applicant confines and/or plans to confine the cultivated species, using a method or plan of operation (including but not limited to, physical confinement) which, on the basis of reliable scientific evidence, is expected to ensure that specific individual organisms comprising an aquaculture crop will enjoy increased growth and be harvestable within a defined geographical area.
- 8. "Aquatic research related activities" means an activity in which research is conducted to evaluate the effect of various factors on the health, growth, or reproduction of aquatic organisms.
- 9. "Assimilative capacity" means the amount of a pollutant or pollutants that can safely be released to a waterbody or segment of a waterbody under the most adverse conditions, as defined in § 1.10(C) of this Part, which will not cause any violations of applicable water quality criteria nor cause measurable harm or alteration to the natural biological community found therein.
- 10. "Background" means the water quality upstream of all point and nonpoint sources of pollution.
- 11. "Best Management Practices" or "BMPs" means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of and impacts upon waters of the State. BMPs also include treatment requirements, operating procedures, and practices to control site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

- "Best Professional Judgment" or "BPJ" means a determination, based on best engineering and/or scientific practices and best management practices, involving any pollutant, combination of pollutants or practice(s), on a case by case basis, which is determined by the Director to be necessary to carry out the provisions of the Clean Water Act and any applicable chapters of the Rhode Island General Laws. BPJ can be used to set Best Available Technology Economically Achievable, Best Conventional Pollutant Control Technology, Best Practicable Control Currently Available or Best Management Practices limitations pursuant to the Clean Water Act 33 U.S.C. § 1251 et seq. either in the absence of an applicable promulgated effluent guideline or where promulgated effluent limitation guidelines only apply to certain aspects of the discharge's operation or to certain pollutants.
- 13. "Bioassay" means a toxicity testing procedure using aquatic organisms to determine the concentration or amount of a toxic pollutant(s) causing a specified response in the test organisms under stated test conditions.
- 14. "Brackish water" means those waters of the state in which the natural level of salinity is greater than 1 (one) part per thousand but less than 10 (ten) parts per thousand, 95 percent or more of the time.
- 15. "C.F.R." means the Code of Federal Regulations.
- 16. "Chronic toxicity" means lethal or sublethal adverse effect(s) to an organism or its progeny, based on various physiological measurements including but not limited to growth, survival, or reproductive success when exposed to a toxic pollutant(s) for a relatively long period of time. The methods commonly used to estimate chronic effects involve exposures of typically seven (7) days or less.
- 17. "Clean Water Act" or "CWA" means the Federal Water Pollution Control Act 33 U.S.C. § 1251 *et seq.* .
- 18. "Coldwater fishery" means waters in which naturally occurring water quality and/or habitat allow the maintenance of naturally reproducing indigenous coldwater fish populations.
- 19. "Combined sewer" means a sewer which serves as a sanitary sewer and a storm sewer.
- 20. "Combined Sewer Overflow" or "CSO" means flow from a combined sewer that is discharged into a receiving water without going to a treatment works. A CSO is distinguished from bypasses which are diversions of waste streams from any portion of a treatment works.

- 21. "Contiguous zone" means the entire zone established by the United States under Article 24 of the Convention on the Territorial Sea and the Contiguous Zone.
- 22. "Controlled relay" means the transplant of shellfish from certain waters to Class SA waters suitable for shellfish harvesting under the coordination and authority of the RIDEM for the purpose of natural purification and controlled harvest, consistent with the National Shellfish Sanitation Program guidance.
- 23. "Cultural eutrophication" means the human-induced acceleration of primary productivity in a surface waterbody resulting in nuisance conditions of algal blooms and/or dense macrophytes.
- 24. "Department" or "Departmental" or "DEM" or "RIDEM" or "Director" means the Rhode Island Department of Environmental Management or the Director of the Department of Environmental Management or any designee to whom the Director delegates the powers and duties vested in that office.
- 25. "Depuration" means the artificial holding of shellfish for purification purposes.
- 26. "Designated bathing beach" means bathing beaches licensed by the Rhode Island Department of Health.
- 27. "Designated uses" means those uses specified in water quality standards for each waterbody or segment whether or not they are being attained. In no case shall assimilation or transport of pollutants be considered a designated use.
- 28. "Discharge" means to cause or allow the addition or release of any pollutants to the waters of the State or placement of any pollutant where it is likely to enter the waters of the State and includes but is not limited to surface water runoff, spilling, depositing, placing, leaking, pumping, pouring, emitting, emptying, or dumping. This definition includes additions of pollutants into waters of the State from both point and nonpoint sources. This term does not include an addition of pollutants by an indirect discharge.
- 29. "Discharger" means any person who causes, or allows, any discharge.
- 30. "Dredging" means the excavation of sediments from beneath surface waters by mechanical or hydraulic means.
- 31. "EC50" means the concentration of a test material in a suitable diluent at which 50 percent of the exposed organisms exhibit a specified response during a specified time period.

- 32. "Effluent limitations" means any restriction imposed by the Director on quantities, discharge rates, and concentrations of pollutants which are discharged from point sources into surface waters of the state or the contiguous zone.
- 33. "Effluent limitation guidelines" means a regulation published by the Administrator under Section 304(b) of the Clean Water Act, 33 U.S.C. § 1314 to adopt or revise effluent limitations.
- 34. "Effluent limited waters" means any segment of a surface waterbody where the water quality currently meets or is expected to meet applicable water quality standards after the application of the technology-based effluent limitations required by Sections 301(b) (33 U.S.C. § 1311) and 306 (U.S.C. § 1316) of the Act.
- 35. "EPA" means the United States Environmental Protection Agency.
- 36. "Existing use" means those designated uses and any other uses that do not impair the designated uses and that are actually attained in a waterbody on or after November 28, 1975; except that in no case shall assimilation or transport of pollutants be considered an existing use.
- 37. "Facility" means any building, structure and operation, including land or appurtenances thereto, on one contiguous site.
- 38. "Filling" means to place dirt, soil, stones, gravel, sand, sediment, tree stumps, brush, leaves, solid waste, debris, garbage, trash, pollutants, or any other material, substance, or structure, either foreign or related, on or in any waters of the state or in such a way as to alter the natural character, function or value of any waters of the State.
- 39. "Fish and wildlife" means birds, fish, shellfish, mammals and all other classes of wild aquatic and land organisms and all types of vegetation upon which they are dependent, including all indigenous species.
- 40. "Flow alteration" means the withdrawal of water from a surface water, either directly or indirectly, or the alteration of the normal flow patterns of a surface water due to a project which diverts or holds the surface water.
- 41. "Freshwater" means those waters of the State in which the natural level of salinity is equal to or less than one (1) part per thousand, 95 percent or more of the time.
- 42. "Groundwater" means water found underground which completely fills the open spaces between particles of soil and within rock formations.
- 43. "Habitat" means the area which provides direct support for a given species, population or community. It includes all environmental features

- that comprise an area such as air, water, vegetation, soil, substrate and hydrologic characteristics.
- 44. "Hazardous substance" means any substance designated under Designation of Hazardous Substances, 40 C.F.R. § 116.4, incorporated above in § 1.3(H) of this Part, pursuant to Section 311 of the Clean Water Act, 33 U.S.C. § 1321.
- 45. "Hazardous waste" means any waste as defined in accordance with R.I. Gen. Laws § 23-19.1-4 and regulations adopted pursuant thereto.
- 46. "High quality waters" means all Class A and SA surface waters as well as other surface waters whose quality exceeds the minimum water quality criteria for any State aquatic life and/or human health criteria or water quality standards assigned to them; or whose quality and characteristics make them critical to the propagation or survival of important living natural resources; or those waters constituting a Special Resource Protection Water or an Outstanding National Resource Water.
- 47. "Indirect discharge" means any discharge into a treatment works.
- 48. "Kettlehole" means a pond or freshwater wetland in a depression in the earth's surface formed by the melting of a wholly or partially buried block of glacial ice.
- 49. "Lake, pond or reservoir" means any body of water, whether naturally occurring or created in whole or in part, excluding sedimentation control or stormwater retention/detention basins, unless constructed in waters of the State.
- 50. "LC50" means the concentration of a test material in a suitable diluent at which 50 percent of the exposed organisms die during a specified time period.
- 51. "Load allocation" means the portion of a receiving water's loading capacity that is attributed either to one of its nonpoint sources of pollution or to natural background sources.
- 52. "Loading capacity" means the maximum amount of loading that a surface water can receive without violating water quality standards.
- 53. "Low quality waters" or "degraded" means any water whose quality falls below any of the criteria of § 1.10(B) of this Part in accordance with Applicable Conditions of § 1.10(C) of this Part and corresponding to its classification as designated in § 1.9(E) of this Part, as determined by the Director, shall be considered degraded for that particular criterion and in violation of its water quality standards and, therefore, unsatisfactory for any designated uses which the Director determines are affected by the

particular criterion which is violated. Waters in their natural hydraulic condition may fail to meet their assigned water quality criteria from time to time due to natural causes, without necessitating the modification of assigned water quality standard. Such waters will not be considered to be violating their water quality standards if violations of criteria are due solely to naturally occurring conditions unrelated to human activities.

#### 54. "Marina" means:

- a. A dock, pier, wharf, float or combination of such facilities that may accommodate five (5) or more recreational vessels as a commercial operation or in association with a club; or
- b. Any dock, pier, wharf, float or combination of such facilities used as a commercial operation, aside from a) above, at which any vessel is serviced or maintained.
- 55. "Marine Sanitation Device (MSD)-Type I" means a marine toilet which, under prescribed test conditions, will produce an effluent that will not exceed a fecal coliform bacteria count of one thousand (1,000) parts per hundred (100) milliliters, and have no visible solids.
- 56. "Marine Sanitation Device (MSD)-Type II" means a marine toilet which, under prescribed test conditions, will produce an effluent that will not exceed a fecal coliform bacteria count of two hundred (200) parts per hundred (100) milliliters, and have suspended solids not greater than one hundred and fifty (150) milligrams per liter.
- 57. "Marine Sanitation Device (MSD)-Type III" means a marine toilet which is designed to prevent the discharge from the vessel of any treated or untreated sewage, or any waste derived from sewage.
- 58. "Marine toilet" means any toilet or receptacle for the containment of human wastes located on or within any vessel, as defined herein, not including a portable potty.
- 59. "Mixing zone" means a limited area or volume in the immediate vicinity of a discharge where mixing occurs and the receiving surface water quality is not required to meet applicable standards or criteria, provided the minimum conditions described in §§ 1.10(B)(5) and (6) of this Part are attained.
- 60. "Municipality" means a quasi-governmental corporation, association or other public body created by or under State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes; a city, town, county, district, or a designated and approved management agency under Section 208 of the Clean Water Act, 33 U.S.C. § 1288.

- 61. "Natural background conditions" means all prevailing dynamic environmental conditions in a waterbody or segment thereof, other than those human-made or human-induced.
- 62. "New discharge" means any discharge which commenced subsequent to November 28, 1975, unless appropriate approvals had been granted.
- 63. "No discharge area/zone" means an area of the surface waters of the State which has been requested by the Director of the Department of Environmental Management and declared by the United States Environmental Protection Agency, pursuant to Section 312 of the Clean Water Act, 33 U.S.C. § 1322, to be an area in which any discharge of sewage from vessels is prohibited.
- 64. "Non-contact cooling water" means water which is used to reduce temperature and does not come into direct contact with any raw material, intermediate product (other than heat), or finished product.
- 65. "Nonpoint Source" or "NPS" means any discharge of pollutants that does not meet the definition of Point Source in Section 502(14) of the Clean Water Act, 33 U.S.C. § 1362, and these regulations. Such sources are diffuse, and often associated with land-use practices, and carry pollutants to the waters of the State, including but not limited to, non-channelized land runoff, drainage, or snowmelt; atmospheric deposition; precipitation; and seepage.
- 66. "Nutrient" means a chemical element or compound such as but not limited to nitrogen or phosphorous which is essential to and promotes the growth and development of marine or freshwater plant species.
- 67. "Outstanding National Resource Waters" or "ONRW" means waters of National and State Parks, Wildlife Refuges, and other such waters designated as having special recreational or ecological value.
- 68. "Person" means an individual, trust, firm, joint stock company, corporation (including a quasi-governmental corporation), partnership, association, syndicate, municipality, municipal or state agency, fire district, club, non-profit agency or any subdivision, commission, department, bureau, agency or department of state or federal government (including any quasi-governmental corporation) or of any interstate body.
- 69. "Point source" means any discernible, confined, and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation or vessel, or other floating craft, from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture.

- 70. "Pollutant" means any dredged material, solid waste, incinerator residue, sewage, garbage, sewage sludge, sediment, filter backwash, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, industrial or municipal or agricultural waste or effluent, petroleum or petroleum products, including but not limited to oil; or any material which will likely alter the physical, chemical, biological or radiological characteristics and/or integrity of water.
- 71. "Pollution" means the human-made or human-induced alteration of the physical, chemical, biological or radiological characteristics and/or integrity of water.
- 72. "Pretreatment requirements" means any limitation or prohibition on quantities, quality, rates, and/or concentrations of pollutants directly or indirectly discharged into or otherwise introduced into a treatment works that are imposed by federal or state regulation or by the treatment works.
- 73. "Primary contact recreational activities" means any recreational activities in which there is prolonged and intimate contact by the human body with the water, involving considerable risk of ingesting water, such as swimming, diving, water skiing and surfing.
- 74. "Priority pollutant" means those pollutants listed pursuant to Section 307(a)(1) of the Clean Water Act, 33 U.S.C. § 1317.
- 75. "Public drinking water supplier" means any city, town, district, or other municipal, public, private corporation or company, or non-profit entity authorized to engage in the collection and treatment of surface water for the purposes of distribution of drinking water in Rhode Island and whose source of drinking water is a surface water in Rhode Island.
- 76. "Public drinking water supply" or "PDWS" means the source of surface water for a public drinking water supplier.
- 77. "Pycnocline" means a steep density gradient in an estuary caused by differences in temperature or salinity between the bottom and surface layers of water that limits mixing of the two layers.
- 78. "Rhode Island Pollutant Discharge Elimination System" or "RIPDES" means the Rhode Island system for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing point source discharge permits and imposing and enforcing pretreatment requirements pursuant to R.I. Gen. Laws Chapter 46-12 and the federal Clean Water Act.
- 79. "RIPDES regulations" means the Rhode Island Pollutant Discharge Elimination System Regulations promulgated by the Department and any amendments thereto.

- 80. "Runoff" means water that drains from an area as surface flow.
- 81. "Sanitary sewer" means a sewer which conveys sewage.
- 82. "Seawater" or "Saltwater" means those waters of the State in which the natural level of salinity is equal to or greater than ten (10) parts per thousand, 95 percent or more of the time.
- 83. "Secondary contact recreational activities" means any recreational activities in which there is minimal contact by the human body with the water, and the probability of ingestion of the water is minimal, such as boating and fishing.
- 84. "Sewage" or "wastewater" means human waste, or wastes from toilets and other receptacles intended to receive or retain body waste, and any wastes, including wastes from households, commercial establishments, and industries.
- 85. "Sewage from vessels" means human body wastes and the wastes from toilets and other receptacles intended to receive or retain body wastes that are discharged from vessels, and regulated under Section 312 of the Clean Water Act, 33 U.S.C. § 1322 or under R.I. Gen. Laws Chapter 46-12.
- 86. "Sewage sludge" or "sludge" means residue, partially solid, or solid, treated or untreated, resulting from the treatment of sewage, including such residues from the cleaning of sewers, by processes such as settling, flotation, filtration and centrifugation, and does not meet the criteria for a hazardous waste.
- 87. "Sewer" means a pipe or conduit that conveys wastewater or stormwater.
- 88. "Site" means the land or water area where any facility or activity is physically located or conducted, including adjacent land used in connection with the facility or activity.
- 89. "Special Resource Protection Waters" or "SRPW" means surface waters identified by the Director as having significant recreational or ecological uses, and may include but are not limited to: wildlife refuge or management areas; public drinking water supplies; State and Federal Parks; State and Federal designated Estuarine Sanctuary Areas; waterbodies containing critical habitats, including but not limited to waterbodies identified by the RIDEM Natural Heritage Program as critical habitat for rare or endangered species; wetland types or specific wetlands listed as rare, threatened, endangered, of special interest or of special concern by the Rhode Island Natural Heritage Program; waterbodies identified by the U. S. Department of the Interior on the Final List of Rivers for potential inclusion in the National Wild and Scenic Rivers System.

- 90. "State guide plan" means goals, policies, or plan elements for the physical, economic, and social development of the State, adopted by the State Planning Council in accordance with R.I. Gen. Laws § 42-11-10.
- 91. "Storm sewer" means a sewer which conveys stormwater.
- 92. "Stormwater" means precipitation induced runoff.
- 93. "Surface water" means any waters of the State that are not groundwaters.
- 94. "Total Maximum Daily Load" or "TMDL" means the amount of a pollutant that may be discharged into a waterbody and still maintain water quality standards. The TMDL is the sum of the individual wasteload allocations for point sources and the load allocations for nonpoint sources and natural background taking into account a margin of safety.
- 95. "Toxicity" means the chemical, biological or biochemical adverse effect(s) of a pollutant or combination of pollutants on organisms.
- 96. "Toxic pollutant" means any pollutant that has the potential to cause toxicity.
- 97. "Treatment works" means any devices and systems for the storage, treatment, recycling, and reclamation of wastewater; any devices and systems for the storage, treatment, recycling and reclamation of sewage from vessels used to implement Section 201 of the Clean Water Act, 33 U.S.C. § 1281; or any devices and systems necessary to recycle or reuse water at the most economical cost over the design life of the works. These include intercepting sewers, outfall sewers, sewage collection systems, pumping, power, and other equipment, and their appurtenances, extensions, improvements, remodeling, additions, and alterations thereof; elements essential to provide a reliable recycled supply such as standby treatment units and clear well facilities; and any works, including acquisition of the land that will be an integral part of the treatment process or is used for ultimate disposal of residues resulting from such treatment (including land for composting sludge, temporary storage of such compost and land used for the storage of treated wastewater in land treatment systems prior to land application); or any other method or system for preventing, abating, reducing, storing, treating, separating, or disposing of wastewater, including wastewater in combined sewers.
- 98. "Undesirable species" or "nuisance species" means any plant or animal aquatic species which becomes so numerous due to pollutants or physical or hydrological modifications that it interferes with, or indicates an impairment of, the designated use(s) of a waterbody.
- 99. "Use attainability analyses" or "UAA" means a structured scientific assessment of the factors affecting the attainment of a use which may

include physical, chemical, biological, and economic factors. The physical, chemical and biological factors affecting the attainment of a use shall be evaluated through a waterbody survey and assessment. Waterbody surveys and assessments shall be sufficiently detailed to evaluate at a minimum:

- a. Current aquatic uses achieved in the waterbody;
- b. Causes of any impairment of the aquatic uses and why the impairment cannot be rectified; and
- c. Aquatic uses(s) that can be attained based on the physical, chemical, and biological characteristics of the water body.
- 100. "Vessel" means any boat or other watercraft whether moved by oars, paddles, sails or other power mechanism, inboard or outboard, or any other boat or structure floating upon the water whether or not capable of self-locomotion, including house boats, floating businesses, barges and similar floating objects.
- 101. "Warmwater fishery" means waters in which naturally occurring water quality and/or habitat support populations of warmwater fish.
- 102. "Wasteload allocation" means the portion of a receiving water's loading capacity that is allocated to one of its point sources of pollution.
- 103. "Wastewater" mean the definition of sewage.
- 104. "Waterbody segment" means a defined section or described area which is part of a larger surface waterbody of the State.
- 105. "Water quality criteria" means elements of the State water quality standards, expressed as constituent concentrations, levels, or narrative statements, representing a quality of water that supports a particular use.
- 106. "Water quality limited waters" means any segment of a surface waterbody where the water quality does not meet applicable water quality standards, and is not expected to meet applicable water quality standards, even after the application of the technology-based effluent limitations required by Sections 301(b) (33 U.S.C. § 1311) and 306 (33. U.S.C. § 1316) of the Clean Water Act.
- 107. "Water quality standard" means provisions of state or federal law which consist of a designated use(s) and water quality criteria for the waters of the State. Water quality standards also consist of an antidegradation policy.

- 108. "Waters of the State" or "the waters" means all surface water and groundwater of the State of Rhode Island, including all tidewaters, territorial seas, wetlands, and land masses partially or wholly submerged in water; and both inter- and intra-state bodies of water which are, have been or will be used in commerce, by industry, for the harvesting of fish and shellfish or for recreational purposes.
- 109. "Wetlands" means those areas that are inundated or saturated by surface or groundwater at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs and similar areas. Freshwater wetlands are determined by the Department in accordance with the Rules and Regulations Governing the Administration and Enforcement of the Fresh Water Wetlands Act. Coastal wetlands are determined by rules and regulations under the jurisdiction of the Coastal Resources Management Council.

### 1.5 Liberal Application

The terms and provisions of these rules and regulations shall be liberally construed to allow the Department to effectuate the purposes of state law.

# 1.6 Severability

If any provision of these rules and regulations or the application thereof to any person or circumstance is held invalid by a court of competent jurisdiction, the remainder of the rules and regulations shall not be affected thereby. The invalidity of any rule or rules or parts of any rule or rules shall not affect the validity of the remainder of these rules and regulations.

# 1.7 Application of these Regulations

- A. Nothing in these rules and regulations shall be deemed to interfere with the Director's power and duty to issue an immediate order pursuant R.I. Gen. Laws § 46-12-10.
- B. These regulations apply to all waters of the State, all systems or means of wastewater treatment, including sewers, all discharges into surface waters, all activities which will likely impact water quality and/or activities that will likely cause or contribute to flow alterations. These regulations shall also apply to those activities regulated by the federal government, other state agencies, and programs within the Department and/or local governmental entities. All departmental regulations should be construed to be consistent and/or complementary and any perceived conflicts are unintentional. Should a perceived conflict arise between or among these regulations and the requirements imposed

by the other departmental regulations or other governmental entities, the most stringent requirement shall govern.

### 1.8 Surface Water Quality Standards

- A. Purpose A water quality standard defines the water quality goals of a surface waterbody, or portion thereof, by designating the use or uses of the water and by setting criteria necessary to protect the uses. Water quality standards are intended to protect public health, safety and welfare, enhance the quality of water and serve the purposes of the Clean Water Act and R.I. Gen. Laws Chapter 46-12. "Serve the purposes of the Act" as defined in Section 101(a)(2) (33 U.S.C. § 1251) and 303(c) (33 U.S.C. § 1313) of the Clean Water Act means that water quality standards should, whenever attainable, provide water quality, including quantity, for the protection and propagation of fish and wildlife and for recreation in and on the water and take into consideration their use and value as public water supplies, propagation of fish and wildlife, recreation in and on the water, agricultural, industrial, and other purposes including navigation.
- B. Such standards serve the dual purposes of establishing the water quality goals for a specific surface water body or waterbody segment and serve as the regulatory basis for the establishment of water-quality-based-treatment controls and strategies beyond the technology-based levels of treatment required by Sections 301(b) (33 U.S.C. § 1311) and 306 (33 U.S.C. §1316) of the Clean Water Act.
- C. Federal Approval and Periodic Review These water quality standards are subject to approval by the Administrator pursuant to Section 303(c) of the Clean Water Act, 33 U.S.C. § 1313. In accordance with paragraph 303(c)(1) of the Act, 33 U.S.C. § 1313, the water quality standards shall be reviewed periodically but at least once every three years, and amended as necessary.
- D. Symbolic Representative of Water Quality Standards The Director shall issue maps from time to time which indicate assigned water use classification.

#### 1.9 Water Use Classification

A. The surface waters of the State shall be assigned to one of the classes listed below. Each class is defined by the designated uses, which are the most sensitive and therefore governing water uses which it is intended to protect. Surface waters may be suitable for other beneficial uses, but shall be regulated to protect and enhance the designated uses. In no case shall waste assimilation or waste transport be considered a designated use.

#### B. Freshwater:

1. Class AA - These waters are designated as a source of public drinking water supply (PDWS) or as tributary waters within a public drinking water

supply watershed (the terminal reservoir of the PDWS are identified in § 1.25 of this Part), for primary and secondary contact recreational activities and for fish and wildlife habitat. These waters shall have excellent aesthetic value.

- a. Class AA waters used for public drinking water supply may be subject to restricted recreational use by State and local authorities.
- 2. Class A These waters are designated for primary and secondary contact recreational activities and for fish and wildlife habitat. They shall be suitable for compatible industrial processes and cooling, hydropower, aquacultural uses, navigation, and irrigation and other agricultural uses. These waters shall have excellent aesthetic value.
- 3. Class B These waters are designated for fish and wildlife habitat and primary and secondary contact recreational activities. They shall be suitable for compatible industrial processes and cooling, hydropower, aquacultural uses, navigation, and irrigation and other agricultural uses. These waters shall have good aesthetic value.
  - a. Certain waterbody segments may have partial use designations assigned to them as noted in § 1.9(D) of this Part.
- 4. Class B1 These waters are designated for primary and secondary contact recreational activities and fish and wildlife habitat. They shall be suitable for compatible industrial processes and cooling, hydropower, aquacultural uses, navigation, and irrigation and other agricultural uses. These waters shall have good aesthetic value. Primary contact recreational activities may be impacted due to pathogens from approved wastewater discharges. However all Class B criteria must be met.
  - a. Certain waterbody segments may have partial use designations assigned to them as noted in § 1.9(D) of this Part.
- 5. Class C These waters are designated for secondary contact recreational activities and fish and wildlife habitat. They shall be suitable for compatible industrial processes and cooling, hydropower, aquacultural uses, navigation, and irrigation and other agricultural uses. These water shall have good aesthetic value.

### C. Seawater:

1. Class SA - These waters are designated for shellfish harvesting for direct human consumption, primary and secondary contact recreational activities, and fish and wildlife habitat. They shall be suitable for aquacultural uses, navigation and industrial cooling. These waters shall have good aesthetic value.

- a. Waterbody segments may have partial use designations assigned to them as noted in § 1.9(D) of this Part.
- b. Some Class SA waters contain Closed Safety Zones which are waters in the vicinity of an approved sanitary discharge which may be impacted in the event of complete failure of treatment and are therefore, currently prohibited to shellfishing. Although shellfishing use is restricted, all SA criteria must be met.
- 2. Class SB These waters are designated for primary and secondary contact recreational activities; shellfish harvesting for controlled relay and depuration; and fish and wildlife habitat. They shall be suitable for aquacultural uses (other than shellfish for direct human consumption), navigation, and industrial cooling. These waters shall have good aesthetic value.
  - a. Waterbody segments may have partial use designations assigned to them as noted in § 1.9(D) of this Part.
- 3. Class SB1 These waters are designated for primary and secondary contact recreational activities and fish and wildlife habitat. They shall be suitable for aquacultural uses (other than shellfish for direct human consumption), navigation, and industrial cooling. These waters shall have good aesthetic value. Primary contact recreational activities may be impacted due to pathogens from approved wastewater discharges. However all Class SB criteria must be met.
  - a. Waterbody segments may have partial use designations assigned to them as noted in § 1.9(D) of this Part.
- 4. Class SC These waters are designated for secondary contact recreational activities, and fish and wildlife habitat. They shall be suitable for aquacultural uses, navigation, and industrial cooling. These waters shall have good aesthetic value.
- D. Partial Uses In accordance with § 1.21 of this Part, the Department may designate a partial use for the above listed water use classifications. Partial use denotes specific restrictions of use assigned to a waterbody or waterbody segment that may affect the application of criteria. Additional partial uses may be so designated by the Director if provided in accordance with § 1.21 of this Part.
  - CSO These waters will likely be impacted by combined sewer overflows in accordance with approved CSO Facilities Plans and in compliance with rule § 1.21(E)(1) of this Part. Therefore, primary contact recreational activities; shellfishing uses; and fish and wildlife habitat will likely be restricted.

- Concentration of Vessels Waters in the vicinity of marinas and/or mooring fields are subject to seasonal shellfishing closures as determined by RIDEM pursuant to R.I. Gen. Laws Chapter 20-8.1;All Class SA criteria must be attained.
- 3. Partial use designations are represented by the lower case letters, "a" or "b", which appear in brackets {} next to the classification as found in § 1.25 of this Part.
- E. Water Quality Classifications All surface waters of the State have been categorized according to the water use classification of §§ 1.9(B), (C), and (D) of this Part based on considerations of public health, safety and welfare, recreation, propagation and protection of fish and wildlife, and economic and social benefit. The surface waters of the State are classified according to the list of water segments in § 1.25 of this Part. For waterbodies not listed in § 1.25 of this Part, the following apply:
  - 1. All streams tributary to Class A waters shall be Class A.
  - 2. All waters tributary to Class AA waters shall be Class AA.
  - 3. All freshwaters hydrologically connected by surface waters and upstream of Class B, B1, SB, SB1, C or SC waters shall be Class B unless otherwise identified in § 1.25 of this Part.
  - 4. All other fresh waters, including, but not limited to, ponds, kettleholes and wetlands not listed in § 1.25 of this Part shall be considered to be Class A.
  - 5. All seawaters not listed in § 1.25 of this Part shall be considered to be Class SA. All saltwater and brackish wetlands contiguous to seawaters not listed in § 1.25 of this Part shall be considered to be Class SA.
  - 6. All saltwater and brackish wetlands contiguous to seawaters listed in § 1.25 of this Part shall be considered the same class as their associated seawaters.

# 1.10 Water Quality Criteria

- A. The following physical, chemical and biological criteria are parameters of the minimum water quality necessary to support the surface water use classifications of §§ 1.9(B), 1.9(C), and 1.9(D) of this Part and shall be applicable to all waters of the State.
- B. General Criteria The following minimum criteria are applicable to all waters of the State, unless criteria specified for individual classes are more stringent:

- 1. At a minimum, all waters shall be free of pollutants in concentrations or combinations or from anthropogenic activities subject to these regulations that:
  - a. Adversely affect the composition of fish and wildlife;
  - b. Adversely affect the physical, chemical, or biological integrity of the habitat:
  - c. Interfere with the propagation of fish and wildlife;
  - d. Adversely alter the life cycle functions, uses, processes and activities of fish and wildlife; or
  - e. Adversely affect human health.
- 2. Aesthetics all waters shall be free from pollutants in concentrations or combinations that:
  - Settle to form deposits that are unsightly, putrescent, or odorous to such a degree as to create a nuisance, or interfere with the existing or designated uses;
  - b. Float as debris, oil, grease, scum or other floating material attributable to wastes in amounts to such a degree as to create a nuisance or interfere with the existing or designated uses;
  - Produce odor or taste or change the color or physical, chemical or biological conditions to such a degree as to create a nuisance or interfere with the existing or designated uses; or,
  - d. Result in the dominance of species of fish and wildlife to such a degree as to create a nuisance or interfere with the existing or designated uses.
- 3. Radioactive substances The level of radioactive materials in all waters shall not be in concentrations or combinations which will likely be harmful to humans, fish and wildlife, or result in concentrations in organisms producing undesirable conditions.
- 4. Nutrients Nutrients shall not exceed the limitations specified in §§ 1.10(D)(1) and 1.10(E)(1) of this Part and/or more stringent site-specific limits necessary to prevent or minimize accelerated or cultural eutrophication.
- 5. Thermal Mixing Zones In the case of thermal discharges into tidal rivers, fresh water streams or estuaries, where thermal mixing zones are allowed by the Director, the mixing zone will be limited to no more than one

- quarter (1/4) of the cross sectional area and/or volume of river flow, stream or estuary, leaving at least three quarters (3/4) free as a zone of passage. In wide estuaries and oceans, the limits of mixing zones will be established by the Director.
- 6. Non-thermal Mixing Zones In the case of non-thermal discharges, in applying these standards the Director may recognize, where appropriate, a limited acute and/or chronic mixing zone(s) on a case-by-case basis. The locations, size and shape of these zones shall provide for the maximum protection of fish and wildlife.
- 7. At a minimum, all mixing zones must:
  - a. Meet the criteria for aesthetics, in accordance with § 1.10(B)(2) of this Part;
  - Be limited to an area or volume that will prevent interference with the existing and designated uses in the associated waterbody segment and beyond;
  - c. Allow an appropriate zone of passage for migrating fish and other organisms, prohibit lethality to organisms passing through the mixing zone, and protect for spawning and nursery habitat; and
  - d. Not allow substances to accumulate in sediments, fish and wildlife or food chains such that known or predicted safe exposure levels for the health of humans or fish and wildlife will be exceeded.
- 8. For activities that will likely cause or contribute to flow alterations, streamflow conditions must be adequate to support existing and designated uses.
- C. Applicable Conditions The water quality standards apply under the most adverse conditions, as determined by the Director according to sound engineering and scientific practices on a case-by-case basis unless defined below. The ambient water quality criteria are applicable at or in excess of the following flow conditions:
  - 1. Aquatic Life Criteria The acute and chronic aquatic life criteria for freshwaters shall not be exceeded at or above the lowest average 7 consecutive day low flow with an average recurrence frequency of once in 10 years (7Q10). The acute and chronic aquatic life criteria for seawater shall not be exceeded beyond the boundary of the mixing zone(s), as defined and determined by §§ 1.10(B)(5) and (6) of this Part, and thence throughout the waterbody. If a mixing zone has not been established, these criteria shall not be exceeded in any portion of the receiving water.

2. Human Health Criteria - The freshwater human health criteria for non-carcinogens and carcinogens are applicable at or in excess of the harmonic mean flow, which is a long-term mean flow value calculated by dividing the number of daily flows analyzed by the sum of the reciprocals of those daily flows. For seawaters, the ambient human health water quality criteria for carcinogens and non-carcinogens are applicable when the most adverse hydrographic and pollution conditions occur at the particular point of evaluation.

### D. Class Specific Criteria-Freshwaters

1. The table below presents the class-specific criteria for freshwaters, classifications AA, A, B, B1, and C and any partial use designation freshwaters.

| CRITERION   | CLASS AA <sup>1</sup>   | CLASS<br>A | CLASS B,<br>B1, B{a},<br>B1{a}   | CLASS C |
|---|---|------------|--|---------|
| Dissolved Oxygen  | Cold Water Fish Habitat - Dissolved oxygen content of not less than 75% saturation, based on a daily average, and an instantaneous minimum dissolved oxygen concentration of at least 5 mg/l, except as naturally occurs. For the period from October 1st to May 14th, where in areas identified by the RI Division of Fish and Wildlife as cold water fish spawning areas the following criteria apply: For species whose early life stages are not directly exposed to the water column (ie, early life stages are intergravel), the 7 day mean water column dissolved oxygen concentration shall not be less than 9.5 mg/l and the instantaneous minimum dissolved oxygen concentration shall not be less than 8 mg/l. For species that have early life stages exposed directly to the water column, the 7 day mean water column dissolved oxygen concentration shall not be less than 6.5 mg/l and the instantaneous minimum dissolved oxygen concentration shall not be less than 5.0 mg/l. (See § 1.25 of this Part for coldwater designated waters)  Warm Water Fish Habitat - Dissolved oxygen content of not less than 60% saturation, based on a daily average, and an instantaneous minimum dissolved oxygen concentration of at least 5.0 mg/l, except as naturally occurs. The 7 day mean water column dissolved oxygen concentration shall not be less than 6 mg/l. (See § 1.25 of this Part for warmwater designated waters) |            |  |         |
| Sludge deposits, solid refuse, floating solids, oil, grease, scum | would impair any usage  |            | None in such amoutns that would impair any usages specifically assigned to this class. |         |
| Color and turbidity   | None in such concentrations that would impair any usages specifically assigned to impair any usages specifically assigned to  |            |  |         |

|  |   |  | s. Turbidity not to exceed 10 natural background.   |   |
|--|---|--|---|---|
| Fecal Coliform Bacteria<br>(MPN/100ml) | Drinking Water Supply Criteria: - applied at the terminal reservoir of the system – Not to exceed a geometric mean value of 20 MPN/100 ml and not more than 10% of the samples shall exceed a value of 200.                                       |  |   | None in such concentrations that would impair any usages specifically assigned to this class. |
|  | Primary Contact Recreational/Swimming Criteria – Not to exceed a geometric mean value of 200 MPN/100 ml and not more than 10% of the total samples taken shall exceed 400 MPN/100 ml, applied only when adequate enterocci data are not available |  |   |   |
| Enterococci                            | Primary Contact Recreational/Swimming Criteria Non-Designated Bathing Beach Waters Geometric Mean Density: 54 colonies/100 ml Designated Bathing Beach Waters Geometric Mean Density: 33 colonies/100 ml  |  | None in such concentrations that would impair any usages specifically assigned to this class.     |   |
|  | Single Sample Maximum*: 61 colonies/100 ml  * Criteria for determining beach swimming advisories at   |  |   |   |
|  | designated beaches as evaluated by Health.  |  |   |   |
| Taste and odor                         | associated with nuisance algal species. impair any us   |  | ch concentrations that would usages specifically assigned nor cause taste or odor in ons of fish. |   |

| pH (Standard Units)              | 6.5 – 9.0 or as naturally occurs.  |
|----------------------------------|--|
| Temperature/Temperature increase | No activity shall raise the temperature of the receiving waters above the recommended limit on the most sensitive receiving water use nor cause the growth of undesirable or nuisance species of biota. In no cases shall an activity cause the temperature to exceed 83 degrees F. Heated discharges into designated coldwater habitats (See § 1.25 of this Part for coldwater designated waters) shall not raise the temperature above 68 degrees F outside an established thermal mixing zone. In no case shall the temperature of the receiving water be raised more than 4 degrees F. |
| Chemical constituents            | None in concentrations or combinations that could be harmful to humans or fish and wildlife for the most sensitive and governing water class use, or unfavorably alter the biota, or which would make the waters unsafe or unsuitable for fish and wildlife or their propagation, impair the palatability of same, or impair waters for any other existing or designated use. None in such concentrations that would exceed the Water Quality Criteria and Guidelines as found in § 1.26 of this Part.   |
|                                  | The ambient concentration of a pollutant in a water body shall not exceed the Ambient Water Quality Criteria and Guidelines, (§ 1.26 of this Part) for the protection of aquatic organisms from acute or chronic effects, unless the criteria or guidelines are modified by the Director based on results of bioassay tests conducted in accordance with the terms and conditions provided in § 1.29 of this Part.   |
| Nutrients                        | Average Total Phosphorus shall not exceed 0.025 mg/l in any lake, pond, kettlehole or reservoir, and average Total P in tributaries at the point where they enter such bodies of water shall not cause exceedance of this phosphorus criteria, except as naturally occurs, unless the Director determines, on a site-specific basis, that a different value for phosphorus is necessary to prevent cultural eutrophication.  |
|                                  | None in such concentration that would impair any usages specifically assigned to said Class, or cause undesirable or nuisance aquatic species associated with cultural eutrophication, nor cause exceedance of the criterion above in a downstream lake,   |

| pond, or reservoir. New discharges of wastes containing phosphates will not be permitted into or immediately upstream of lakes or ponds. Phosphates shall be removed from existing discharges to the extent that such removal is or may become technically and reasonably feasible. |
|---|
|---|

<sup>&</sup>lt;sup>1</sup> Class AA waters used for public drinking water supply may be subject to restricted recreational use by State and local authorities.

### E. Class Specific Criteria-Saltwaters

1. The table below presents the class-specific criteria for saltwaters, classifications SA, SB, SB1, and SC and any partial use designation saltwaters.

| CRITERION  | CLASS SA, SA{b}  | CLASS SB, SB1, SB{a}, SB1{a} | CLASS SC  |
|--|--|------------------------------|---|
| Sludge deposits,<br>solid refuse, floating<br>solids, oil, grease,<br>scum | None allowable.  |                              | None in such amounts that would impair any usages specifically assigned to this class.        |
| Color and turbidity  | None in such concentrations that would impair any usages specifically assigned to this class. Turbidity not to exceed 5 NTU over background.   |                              |   |
| Fecal Coliform<br>Bacteria   | Shellfishing Criteria: - Not to exceed a geometric mean MPN or MF (mTEC) value of 14 per 100ml and not more than either 10% of the estimated 90th percentile of the samples shall exceed an MPN value of 49 per 100ml for a three-tube decimal dilution or 31 cfu per 100ml for MF (mTEC).  Primary Contact Recreational/Swimming Criteria - Not to exceed a |                              | None in such concentrations that would impair any usages specifically assigned to this class. |
|  | geometric mean value of 50 MPN/100 ml and not more than 10% of the total samples taken shall exceed 400 MPN/100 ml, applied only when adequate enterococci data are not available.   |                              |   |

| Enterococci           | Primary Contact Recreational/Swimming Criteria Geometric Mean Density: 35 colonies/100 ml Single Sample Maximum*: 104 colonies/100 ml * Criteria for determining beach swimming advisories at designated beaches as evaluated by the Rhode Island Department of Health.  |  | None in such concentrations that would impair any usages specifically assigned to this class. |
|-----------------------|--|--|---|
| Taste and odor        | None allowable except as naturally occurs.  None in such concentrations that we specifically assigned to this class no portions of fish or shellfish.  |  | . , ,   |
| рН                    | 6.5 - 8.5 but not more than 0.2 units outside of the normally occurring range.   |  |   |
| Dissolved Oxygen      | See § 1.10(F) of this Part   |  |   |
| Chemical constituents | None in concentrations or combinations that could be harmful to humans or fish and wildlife for the most sensitive and governing water class use, or unfavorably alter the biota, or which would make the waters unsafe or unsuitable for fish and wildlife or their propagation, impair the palatability of same, or impair the waters for any other existing or designated use. None in such concentrations that would exceed the Water Quality Criteria and Guidelines as found in § 1.26 of this Part.  The ambient concentration of a pollutant in a water body shall not exceed the RI DEM Ambient Water Quality Criteria & Guidelines (§ 1.26 of this Part) for the protection of aquatic organisms from acute or chronic effects, unless the criteria or guideline is modified by the Director based on results of bioassay tests conducted in accordance with the terms and conditions provided in § 1.29 of this Part. |  |   |
| Nutrients             | None in such concentration that would impair any usages specifically assigned to said Class, or cause undesirable or nuisance aquatic species associated with cultural eutrophication. Shall not exceed site-specific limits if deemed necessary by the Director to prevent or minimize accelerated or cultural eutrophication. Total phosphorus, nitrates and ammonia may be assigned site-specific permit limits based on reasonable Best Available Technologies. Where waters have low tidal flushing rates,  |  |   |

|   | applicable treatment to prevent or minimize accelerated or cultural eutrophication may be required for regulated nonpoint source activities.  |
|---|---|
| Temperature/<br>Temperature<br>Increase | Activities shall not increase the temperature except where the increase will not exceed the recommended limit on the most sensitive receiving water use and in no case shall an activity cause the temperature to exceed 83 degrees F nor raise the normal temperature more than 1.6 degrees F, 16 June through September and not more than 4 degrees F from October through 16 June. All measurements shall be made at the boundary of such mixing zones as is found to be reasonable by the Director. |

- F. Saltwater Dissolved Oxygen Criteria The following information details the use of continuous dissolved oxygen data in estuarine waters.
  - 1. For surface waters above a seasonal pycnocline, not less than an instantaneous value of 4.8 mg/l more than once every three years, except as naturally occurs.
  - 2. For waters below the seasonal pycnocline, Aquatic Life Uses are considered to be protected if conditions do not fail to meet protective thresholds, as described below, more than once every three years. DO criteria presented here shall be protective of the most sensitive life stage survival effects on larvae which affects larval recruitment - for both persistent and cyclic conditions. This criteria evaluates effects of exposure to low DO over time on larval recruitment. Because larval recruitment occurs over the whole season, the low DO exposure effects are cumulative. Exposures are evaluated on a daily basis to determine the total seasonal exposure. The criteria to protect larval survival is established to limit the number of exposure days over the range of low DO conditions such that the cumulative percentage of larvae affected shall not exceed a 5% reduction in larval recruitment over the season. If the Director determines that a smaller percent impairment on larval recruitment is necessary on a site specific basis, a criteria modification will be process in accordance with § 1.21(F) of this Part. Protection of larval survival will also afford adequate protection of juvenile and adult life stages. The critical recruitment season for evaluation of DO exposure is defined as May 1 through October 31. While recruitment may occur at other periods of the year, this timeframe reflects periods when hypoxia are most prevalent. Waters with a DO concentration above an instantaneous value of 4.8 mg/l shall be considered protective of Aquatic Life Uses. When instantaneous DO values fall below 4.8 mg/l, the waters shall not be:
    - a. Less than 2.9 mg/l for more than 24 consecutive hours during recruitment season; nor
    - b. Less than 1.4 mg/l for more than 1 hour more than twice during the recruitment season; nor
    - c. Shall they exceed the cumulative exposure presented in § 1.10(F)(3) of this Part.
    - d. The method for calculating cumulative low DO exposure throughout the recruitment season is as follows:
      - (1) For persistent low DO conditions (low DO conditions that vary little within a day, e.g., <0.5 mg/l), the limit represents allowable DO conditions below 4.8 mg/l provided the exposure duration (number of days observed) does not exceed the corresponding allowable number of days (as presented in § 1.10(F)(2)(d)(1)(AA) of this Part) that ensure

adequate larval recruitment over the course of the season. The cumulative seasonal low DO effects are evaluated by totaling the fractions of the observed (or projected) exposure duration (in days) divided by the allowable number of days for each DO concentration. The sum of the decimal fractions shall not exceed 1.0. The minimum daily DO measurement is used to represent the daily DO value. The criteria for 24 hour DO concentration and allowable number of days as presented in § 1.10(F)(2)(d)(1)(AA) of this Part are calculated using the following equations:

∑tj(actual)/tj(allowed) < 1.0

DQi = 13.0/(2.80 + 1.84e<sup>(-0.10t)</sup>)

Where DQi = allowable concentration (mg/l)

tj = exposure interval duration (days)

j = exposure interval

(AA) Saltwater DO Criteria for Waters Below the Seasonal Pycnocline

| 24 Hour (Daily)<br>DO Exposure<br>Concentration<br>(mg/L) | Daily Percent Larval<br>Mortality (%) | Allowable Number of<br>Days Without<br>Exceeding a 5%<br>Reduction in Seasonal<br>Larval Recruitment |
|---|---------------------------------------|--|
| 4.6   | 4.96                                  | 42   |
| 4.5   | 6.05                                  | 30   |
| 4.4   | 7.36                                  | 24   |
| 4.3   | 8.93                                  | 20   |
| 4.2   | 10.79                                 | 18   |
| 4.1   | 12.98                                 | 16   |
| 4   | 15.55                                 | 14   |
| 3.9   | 18.51                                 | 12   |

| 3.8 | 21.88 | 10 |
|-----|-------|----|
| 3.7 | 25.69 | 9  |
| 3.6 | 29.89 | 8  |
| 3.5 | 34.47 | 7  |
| 3.4 | 39.36 | 6  |
| 3.3 | 44.46 | 5  |
| 3.2 | 49.69 | 4  |
| 3.1 | 54.92 | 3  |
| 3   | 60.05 | 2  |
| 2.9 | 64.97 | 1  |

- (2) For cyclic low DO conditions (DO conditions that fluctuate broadly within a day, e.g.>0.5 mg/l), the limit represents the allowable number of days as a given daily larval percent mortality that protects against great than 5% cumulative impairment of larval recruitment over a recruitment season. The maximum daily percent larval mortality is a function of DO minimum for any exposure interval/range (mg/l) and the duration of the interval (hours) and is determined using the Time-to-death (TTD) curves presented in § 1.10(F)(2)(d)(2)(AA) of this Part The maximum daily percent larval mortality from cyclic exposures is determined from the observed data point falling closest to a TTD curve of greatest effect (ie., highest percent mortality). The calculated maximum daily percent larval mortality shall not exceed the allowable number of days as presented in § 1.10(F)(2)(d)(1)(AA) and § 1.10(F)(2)(d)(2)(BB) of this Part. Cumulative cyclic low DO effects observed over the course of the season are evaluated by tallying the number of days at each percent mortality observed for the season. The observed number of days at each percent mortality are divided by the allowable number of days for each percent mortality. The sum of the decimal fraction shall not exceed 1.0.
  - (AA) Time To Death (TTD) Curves for 5-60% Mortality

(BB) Cyclic Translator for Waters Below the Seasonal Pycnocline

- (3) For seasons with both cyclic and persistent cycles of low DO, all data will be treated as cyclic exposure patterns with the persistent data set at the 24 hour/1-day exposure duration. Daily percent mortalities will be determined from § 1.10(F)(2)(d)(2)(AA) and § 1.10(F)(2)(d)(1)(AA) of this Part will be used to determine the acceptable number of days the low DO pattern can occur over the course of the season.
- 3. For waters without a seasonal pycnocline, DO concentrations above 4.8 mg/l shall be considered protective of Aquatic Life Uses. When instantaneous DO values fall below 4.8 mg/l, the water shall not be:

- a. Less than 3.0 mg/l for more than 24 consecutive hours during the recruitment season; nor
- b. Less than 1.4 mg/l for more than 1 hour more than twice during the recruitment season; nor
- c. Shall they exceed the cumulative DO exposure presented in § 1.10(F)(2)(d)(1)(AA) of this Part.
- d. Cumulative low DO exposures in the 2.95 4.8 mg/l range shall be evaluated as described above in § 1.10(F)(2) of this Part but shall not exceed the information presented in § 1.10(F)(3)(e)(1)(AA) of this Part.
- e. The method for calculating cumulative low DO exposure is as follows:
  - (1) For persistent low DO conditions in water without a seasonal pycnocline, the criteria for 24 hours DO concentration and allowable number of days as presented in § 1.10(F)(3)(e)(1)(AA) of this Part are calculated using the following equation:

$$DOi = 17.523/(3.3 + 2.01e^{(-0.091 t_t)})$$

Where DOi = allowable concentration (mg/l)

ti = exposure interval duration (days)

į = exposure interval

(AA) Saltwater DO Criteria for Waters without a Seasonal Pycnocline

| 24 Hour (Daily)<br>DO Exposure<br>Concentration<br>(mg/L) | Daily Percent Larval<br>Mortality (%) | Allowable Number of Days Without Exceeding a 5% Reduction in Seasonal Larval Recruitment |
|---|---------------------------------------|--|
| 4.6   | 4.96                                  | 16   |
| 4.5   | 6.05                                  | 14   |
| 4.4   | 7.36                                  | 12   |
| 4.3   | 8.93                                  | 11   |

| 4.2 | 10.79 | 10 |
|-----|-------|----|
| 4.1 | 12.98 | 8  |
| 4.0 | 15.55 | 7  |
| 3.9 | 18.51 | 6  |
| 3.8 | 21.88 | 5  |
| 3.7 | 25.69 | 4  |
| 3.6 | 29.89 | 3  |
| 3.5 | 34.47 | 2  |
| 3.4 | 39.36 | 1  |

- (2) For cyclic low DO conditions in waters without a seasonal pycnocline, the daily percent mortalities for observed data are determined from § 1.10(F)(2)(d)(2)(AA) of this Part and shall not exceed the allowable number of days presented in § 1.10(F)(3)(e)(1)(AA) and § 1.10(F)(3)(e)(2)(AA) of this Part.
  - (AA) Cyclic Translator for Waters Without a Seasonal Pycnocline

(3) For seasons with both cyclic and persistent cycles of low DO, all data will be treated as cyclic exposure patterns with the persistent data set at the 24 hours/1-day exposure duration. Daily percent mortalities will be determined from § 1.10(F)(2)(d)(2)(AA) and § 1.10(F)(3)(e)(1)(AA) of this Part will be used to determine the acceptable number of days the low DO pattern can occur over the course of the season.

## 1.11 Effect of Activities on Water Quality Standards

- A. Activities Shall Not Violate Water Quality Standards No person shall discharge pollutants into any waters of the State or perform any activities alone or in combination which the Director determines will likely result in the violation of any State water quality criterion or interfere with one or more of the existing or designated uses assigned to the receiving waters or to downstream waters in accordance with §§ 1.9, 1.10, and 1.20 of this Part. In addition, Best Management Practices, as determined by the Director, shall be used to control erosion, sedimentation and runoff in accordance with § 1.17 of this Part.
- B. Activities Shall Not Further Degrade Low Quality Waters No person shall discharge pollutants into any waters of the State, or perform any activities alone or in combination which the Director determines will likely result in the additional degradation of water quality of the receiving waters or downstream waters which are already below the water quality standard assigned to such waters.
- C. Activities Shall Not Violate Antidegradation No person shall discharge pollutants into any waters of the State, or perform any activities alone or in combination which the Director determines will likely result in a violation of the Antidegradation provisions of these regulations (§ 1.20 of this Part).
- D. Mixing Zone Due to discharges to surface waters, the Director may recognize, where appropriate, a limited mixing zone on a case-by-case basis. In no case may a mixing zone cause a loss of, or impair, any existing or designated use.
- E. Restrictions to New Discharges New discharges into Class AA, A or SA waters (refer to § 1.25 of this Part) or into waters designated Class B, C, SB or SC which have attained the Class A or SA standard shall be allowed, provided the discharge will not impair existing uses nor attainment of designated uses and all other provisions of these regulations are complied with including all required approvals, and it complies with the following restrictions:
  - 1. New discharges into the terminal reservoir of a, public drinking water supply shall be prohibited with the exception of discharges of stormwater drainage. New discharges into all other waters of the public drinking water supply shall be prohibited with the exception of the types listed in §§

- 1.11(E)(2)(a) through (f) of this Part. Notification will be made to the affected public drinking water supplier and the Department of Health of a proposed new discharge to a public drinking water supply which is under review by this Department in accordance with these regulations.
- 2. New discharges into waters that are not public drinking water supplies may include:
  - a. discharges of stormwater drainage;
  - b. discharges from industrial non-contact cooling water;
  - c. discharges from construction site dewatering provided that the applicant has demonstrated to the satisfaction of the Director that no reasonable alternatives exist:
  - discharges from groundwater remediation projects provided that the applicant has demonstrated to the satisfaction of the Director that no reasonable alternatives exist;
  - e. discharges from aquaculture facilities as appropriately authorized by all required state agencies;
  - f. discharges from water main maintenance such as main flushing and cleaning operations;
  - g. discharges of dredged material;
  - h. discharges from farming activities into surface waters which are hydrographically disconnected from all other surface waters;
  - placement of suitable solid materials in appropriate amounts for the purpose of the formation of an artificial reef as approved by the Director;
  - j. discharges from aquatic research related activities provided that the applicant has demonstrated to the satisfaction of the Director that no reasonable alternatives exist;
  - k. discharges from desalination facilities into seawaters; and
  - I. other new discharges provided the applicant demonstrates to the satisfaction of the Director that:
    - (1) the discharge serves a compelling public purpose which provides benefits to the public as a whole as opposed to individual or private interests;
    - (2) there is no reasonable alternative means of, or location for, serving the compelling public purpose cited; and

(3) the discharge will not impair existing uses nor attainment of designated uses.

# 1.12 Procedures for Determining Additional Requirements for Effluent Limitations, Treatment and Pretreatment

- A. Effluent Limited and Water Quality Limited Waters No person shall discharge pollutants into any surface waters of the State or discharge to a treatment works unless the discharge complies with any additional effluent limitations and receives any additional treatment/pretreatment which the Director determines is necessary to comply with § 1.11 of this Part, or to prevent overloading or damaging effect upon a treatment works. In order to determine which waters require additional effluent limitations, treatment or pretreatment to comply with § 1.11 of this Part, or to prevent overloading or damaging effects upon a treatment works, the Director will categorize the surface waters of the State into effluent limited and water quality limited waters. Such classifications will be recorded in Section 305(b) of the Clean Water Act, 33 U.S.C. § 1315, biennial State of the State's waters reports, and will be revised as necessary.
- B. Total Maximum Daily Loads in Water Quality Limited Waters For water quality limited waters, the Director shall identify those pollutants within discharges to the water quality limited waters which do or have the reasonable potential to cause or contribute to a violation of § 1.11 of this Part. The Director shall develop a total maximum daily load (TMDL) for each of these pollutants. The TMDL shall determine the maximum amount of the pollutant that can be discharged into the water quality limited waters and be in compliance with § 1.11 of this Part. The TMDL shall be based on best available scientific information and allocation of the TMDL may be based on, but not limited to, technical feasibility of pollutant removal, the relative costs of treatment to the contributing discharges, and the relative contribution from each source. The Director shall not be required to allocate the full amount of the pollutant specified in § 1.11 of this Part, but may designate a portion of the allocation as a reserve or margin of safety as deemed necessary.

## 1.13 Prohibited Discharges

- A. General The prohibitions enumerated in this rule apply to all pollutants, regardless of the effect on water quality standards or the treatment which the pollutants receive.
- B. Pollutants No person shall discharge pollutants into the waters of the State except as in compliance with the provisions of R.I. Gen. Laws Chapter 46-12, or other applicable chapters, of the Rhode Island General Laws or these regulations, and pursuant to the terms and conditions of an approval issued by DEM thereunder.
- C. Urban Runoff No person shall discharge storm water, gutter runoff, sump discharges, or street runoff to a treatment works designed to receive only wastewater.

- D. Hazardous Waste and Hazardous Substances No person shall discharge hazardous waste or hazardous substances into any waters of the State or discharge hazardous waste or hazardous substances into a wastewater treatment works, except as in compliance with the provisions of R.I. Gen. Laws Chapter 46-12, or other applicable chapters of the Rhode Island General Laws or these regulations, and in accordance with the terms and conditions of an approval issued by the Director or municipality as may be required under the Rhode Island Pretreatment Regulations.
- E. Oil, Petroleum Products, Solvents No person shall discharge oil, petroleum products or industrial solvents into treatment works designed to treat or control only wastewater or stormwater unless it conforms with federal, state and local pretreatment requirements. No person shall discharge oil or petroleum products into the waters of the State except as in compliance with the provisions of R.I. Gen. Laws Chapter 46-12, or other applicable chapters of the Rhode Island General Laws or these regulations, and in accordance with the terms and conditions of an approval issued by DEM thereunder.

#### F. Discharges of Sewage from Vessels

- 1. No person shall discharge any sewage from a vessel into the waters of the State.
- 2. No person shall operate or moor in the waters of the State a vessel equipped with a marine toilet that is:
  - a. Not a type approved pursuant to the CWA;
  - b. An approved type that is not in proper working condition; or
  - c. That does not have the vessel's marine toilets properly sealed to prevent overboard discharges by one of the following means: the through-hull fitting is plugged; or the Y-valve is secured to the holding tank position by means of a padlock, wire tie, or by removing the seacock handle.
- 3. All sewage must be discharged to an approved marina pump-out facility.

## 1.14 Strategic Plan Consistency

In addition to the other requirements of these regulations, no person shall discharge any pollutants into any waters of the State so as to violate any legally applicable requirements of a plan approved by the Governor of Rhode Island and the Administrator pursuant to Sections 208(6) (33 U.S.C. § 1288), 319 (33 U.S.C. § 1329), and 320 (33 U.S.C. § 1330) of the Clean Water Act.

# 1.15 Approvals

A. No person shall: discharge any pollutant into, or conduct any activity which will likely cause or contribute pollution to, the waters of the State; or construct, install,

or modify any treatment works including the extension of sewers to an existing sewer system, without having obtained all required approvals from the Director. The types of approval for the purposes of these regulations may include the following:

- 1. Rhode Island Pollutant Discharge Elimination System (RIPDES) permit by DEM, Water Resources in accordance with the RIPDES Regulations.
- 2. Order of Approval from DEM, Water Resources for any treatment works in accordance with §§ 1.16 though 1.19 of this Part.
- 3. Water Quality Certificate (WQC) the activity(ies) listed below require approval in the form of a certification by DEM, Water Resources that the proposed activity(ies) does not violate these regulations. A WQC shall have the full force and effect of a permit issued by the Director. The permit required under the Rhode Island Pollutant Discharge Elimination System Regulations may act as the Water Quality Certification for the discharge.
  - a. In accordance with Section 401 of the Clean Water Act, 33 U.S.C. § 1341, applicants for any project which may result in a discharge to waters of the State and which requires a federal permit must directly apply for and receive a Water Quality Certification from DEM, Water Resources, except as described in § 1.15(A)(3)(b)(1)(AA) of this Part.
  - b. Those projects involving one or more of the activities listed below which are within the jurisdiction of the Rhode Island Coastal Resources Management Council in accordance with R.I. Gen. Laws Chapter 46-23, and which do not require an approval in accordance with the R.I. Gen. Law § 2-1-18 et. seq. or any rules and regulations promulgated thereto, must directly apply for and receive Water Quality Certification from DEM, Water Resources except as described in § § 1.15(A)(3)(b)(1)(AA) and 1.15(A)(3)(b)(4)(AA)of this Part.
    - (1) Dredging and Dredged Material Disposal
      - (AA) With regard to marine dredging, discharge of dredge material and placement of dredge material in tidal waters, the application process and decision for the water quality review will be conducted in accordance with Part 2 of this Subchapter.
    - (2) Filling of Waters of the State
    - (3) Marinas and Mooring Fields construction of new facilities or expansion of existing facilities
    - (4) Flow Alterations

- (AA) Flow Alterations for agricultural irrigation will be managed through coordination with DEM/Agriculture.
- (5) Harbor Management Plans for those elements which will likely affect water quality
- c. The permit required under the RIDEM Rules and Regulations Governing the Administration and Enforcement of the Fresh Water Wetlands Act (Fresh Water Wetlands Regulations) may act as the Water Quality Certification for the discharge, including stormwater discharge.
- d. Where a project or activity listed in § 1.15(A)(3) of this Part also requires a permit by any one of the following DEM permit programs, the WQC decision may be incorporated into the decision issued under said program:
  - (1) Wetlands permit or determination in accordance with the Rules and Regulation Governing the Administration and Enforcement of the Freshwater Wetlands Act
  - (2) ISDS permit or determination in accordance with regulations Establishing Minimum Standards Relating to the Location, Design, Construction and Maintenance of Onsite Wastewater Treatment Systems
  - (3) RIPDES permit in accordance with the Regulations for the Rhode Island Pollutant Discharge Elimination System
  - (4) Marine dredging and dredged material disposal permit in accordance with the Part 2 of this Subchapter.
  - (5) UIC permit in accordance with the Part 4 of this Subchapter.
- e. Where the Director determines that a WQC decision will be incorporated with one of the above permit decisions, the corresponding public notice requirements and appeal procedures contained in the regulations of the associated permit program will apply in lieu of those contained in §§ 1.17 and 1.23 of this Part herein, respectively. However, when the activity is subject to § 1.15(A)(3)(a) of this Part, and the listed permit decision does not require public notification, the requirements of § 1.17 of this Part will be applied. All other provisions contained in these regulations shall apply.

## 1.16 Application for Approvals

A. Application - More than one of the approvals noted in § 1.15 of this Part may be required. Applications for RIPDES permits shall be submitted and processed in accordance with the Regulations for the Rhode Island Pollutant Discharge

Elimination System RIPDES. Applications for Orders of Approval and Water Quality Certifications will be on forms provided by or in the manner prescribed by, DEM, to be submitted to the Director and shall contain such documentation and/or information as the Director may require, including but not limited to:

- 1. When applicable, documentation that the proposed project is consistent with the currently approved wastewater facility plan or information necessary to modify an approved wastewater facility plan, including but not limited to the project needs, conformance with State Guide Plan policies, goals, and objectives, the basis of design, including design assumptions, data, and calculations;
- 2. Comprehensive engineering report and detailed engineering plans and specifications for the proposed project;
- 3. Timetable for and duration of the proposed construction or other activity;
- 4. Any additional information as may be deemed necessary by the Director to fully assess the impact of the proposed activity upon the waters of the State or to support any changes in the scope of the project, actual or anticipated;
- 5. Any additional information including proprietary data, where, in the opinion of the Director, such information is necessary to fully disclose all relevant facts concerning the application for an approval. The applicant may assert a claim of confidentiality for proprietary data as defined in R.I. Gen. Laws § 38-2-2 provided said information is clearly marked and segregated within the total information requested by the Department; and
- 6. A preponderance of clear and scientifically valid evidence having a probative value demonstrating, to the satisfaction of the Director, that the activity will not violate the surface water quality standards established by these Water Quality Regulations, and amendments thereto.
- B. Professional Certification for Plans and Specifications All engineering plans and specifications required under § 1.16(A) of this Part shall be certified by a professional engineer registered in the State pursuant to R.I. Gen. Laws Chapter 5-8.
- C. Failure of the applicant to submit information deemed necessary by the Department in order to fully assess the impact of the proposed project on waters of the State or to support any changes in the scope of the proposed project, actual or anticipated, shall constitute valid cause for denial of the application.
- D. The requirements of the 2010 Stormwater Design and Installation Standards Manual as amended in March 2015 shall apply to all applications proposing the generation of stormwater discharges on any applicable project listed in § 1.15 of this Part.

# 1.17 Procedures for Review of Applications for Orders of Approval and Water Quality Certifications

Α. In consideration of the application, the Department may use, but is not limited to, the following documents: Guides for the Design of Wastewater Treatment Works (TR-16, 2011 Edition as Revised in 2016), published by the New England Interstate Water Pollution Control Commission; Design of Water Resource Recovery Facilities (WEF Manual of Practice #8 & ASCE Manual and Report on Engineering Practice #76), jointly published by the Water Environment Federation and the American Society of Civil Engineers (Sixth Edition); Rhode Island Soil Erosion and Sediment Control Handbook, developed jointly by R.I. DEM and U.S. Department of Agriculture Natural Resources Conservation Service (2016); State of Rhode Island Stormwater Design and Installation Standards Manual (2010 version amended March 2015), developed jointly by R.I. DEM and Coastal Resources Management Council; ; the Technical Support Document for Water Quality-based Toxics Control, March 1991, EPA/505/2-90-001; Evaluation of Dredged Material Proposed for Ocean Disposal Testing Manual, February 1991, EPA-503/8-91/001; Interim Regional Policy for New England Stream Flow Recommendations, U.S. Department of Interior, Fish and Wildlife Service; Water Quality Standards Handbook, 2nd. Ed., August 1994, EPA-823-B-94-005a.

#### B. Application Completeness

- 1. Upon receipt of an application, the Department will review the application for completeness and shall notify the applicant in writing whether the application is complete. Where the Department has deemed an application to be deficient, the processing of the application will be suspended and the applicant shall correct said deficiencies to the satisfaction of the Department.
- C. At any time during review, the Director may:
  - 1. Require that the applicant provide such information as the Director deems necessary for the review of the application;
  - 2. Issue an approval requiring such terms, conditions, management practices and operation and maintenance requirements as deemed necessary to comply with the requirements of applicable state or federal laws; or
  - 3. Deny the application for failure to satisfy the requirements of applicable state or federal laws and advise the applicant of the right to appeal under § 1.23 of this Part. A denial may be based on, but is not limited to any or all of the following:
    - a. A treatment works which is overloaded or inadequate to accept and treat any additional load of pollutants in which case the Director, shall, where appropriate, also deny applications for new sewer connection or additional discharges to the system;

- b. An activity or a treatment works or any part thereof, which is likely to substantially contribute to an increase in non-point source pollution which will likely result in a violation of state or federal laws or these regulations or any other regulations of the Department;
- c. A treatment works or any part thereof, or a project which is not consistent with the approved Wastewater Facilities Plan;
- d. Failure to submit any information required by the Department; or
- e. Failure to provide a preponderance of clear and scientifically valid evidence having a probative value demonstrating, to the satisfaction of the Director, that the activity will not violate the surface water quality standards established by these Water Quality Regulations, and amendments thereto.
- D. Public Notice and Consideration of Public Comment for Applications for Water Quality Certification
  - 1. Certification Public Notice Upon determination that an application for water quality certification is complete, the Director shall provide or have the applicant provide in a form approved in writing by the Department, written notice of the proposed project to all abutters of any property upon which the activity will occur, and to any other such persons, agencies or organizations deemed appropriate by the Director. At a minimum the chief elected officer of the city or town within which the activity will be conducted, shall be notified.
    - a. For projects that the Director determines have the potential to result in impacts beyond the abutting property(ies) or that notification of abutters is impracticable, the notice shall be published in a daily or weekly newspaper with circulation in the involved area. The Department may also require the applicant to publish notice, in a form approved in writing by the Department, in an additional daily or weekly newspaper with circulation that includes the community nearest the proposed location, or statewide.
  - 2. Comment Period The notice will provide for a thirty-day comment period during which time any person may provide written comments which may include a request for a hearing on the project or activity proposed by the application.
  - 3. Public Hearing The Director shall provide an opportunity for oral comments if a hearing is requested by twenty-five (25) persons, or by a governmental subdivision or agency, or by an association having not less than twenty-five (25) members. The applicant, all persons receiving notice under § 1.17(D)(1) of this Part, and all persons submitting comments or requesting a hearing under § 1.17(D)(2) of this Part shall be notified consistent with the requirements of § 1.17(D)(1) of this Part, at least fourteen (14) days in advance, of the time and place of the hearing.

- 4. Consideration of Comments The Director shall consider all written and oral comments and may approve modifications to the application package made in response to comments received, without requiring another notice and comment period, provided the modifications are minor in nature and will have little or no adverse environmental impact.
- 5. Notice of Decision All persons who submit comments, either orally at the hearing or in writing, shall receive written notice of the final agency decision on the application.
- 6. Modifications The Director may approve modifications to an approved project or activity without further notice, provided that the project had been noticed in accordance with § 1.17(D) of this Part, and such modifications are minor in nature and will have little or no adverse environmental impact.

## 1.18 Effect of Approval

- A. The issuance of an approval mandates compliance with all terms, conditions, management practices and operation and maintenance requirements set forth in the approval. Any violation of these may result in the finding of a prohibited discharge as set forth in § 1.13 of this Part.
- B. The issuance of an approval does not relieve any person of the continuing responsibility to comply with any applicable rule of these regulations or applicable sections of the Clean Water Act.
- C. The issuance of an approval by the Department does not relieve any person of the responsibility for obtaining any other necessary permits or approvals from any federal, state, regional, or local agency.
- D. The issuance of an approval does not authorize any injury to persons or property or invasion of other private rights, or any infringement of Federal, State or local law or regulations.

#### 1.19 Modification, Expiration, Suspension or Revocation of Approval

- A. The Director may modify, suspend, or revoke, in whole or in part, an approval for cause, including, but not limited to:
  - Information indicating that the project will likely result in probable harm to the environment or pose a threat to the health, safety and/or welfare of the public;
  - The existence of a factor or factors which, if properly and timely brought to the attention of the Director, would have justified the application of more or less stringent conditions than required by these regulations, but only if such factor(s) arose after the approval was issued;

- 3. Changes in effluent limitations in accordance with § 1.12 of this Part, or changes in the definition(s) of such limitations in the Clean Water Act or applicable Environmental Protection Agency regulations;
- 4. Where circumstances on which the approval was based have materially and substantially changed since the approval was issued, including, but not limited to, a change in category of waters from effluent limited to water quality limited, or amendment of these regulations;
- 5. The information or data submitted by the applicant or permittee either on the form(s) required or in any other material in support of the application is found to be false, misleading or erroneous; or
- 6. The project is not undertaken in strict compliance with the conditions or provisions of any approval issued by the Department.
- B. A Notice of Revocation/Suspension of an approval will be in the form of a letter notifying the permittee or subsequent transferee of the revocation or suspension and the reasons why the approval is being revoked or suspended.
- C. The party served with a Notice of Revocation/Suspension of an approval may request an adjudicatory hearing to contest the revocation as set forth in the provisions of § 1.23 of this Part. A Notice of Revocation/Suspension of an approval automatically becomes a final order of the Director enforceable in Superior Court upon failure to request said adjudicatory hearing.
- D. Request for modification of approval shall be in accordance with §§ 1.16 and 1.17 of this Part.

#### 1.20 Antidegradation of Water Quality Standards

- A. Purpose The State Antidegradation Regulations are based on the federal Antidegradation Policy requirements, Antidegradation Policy and Implementation Methods, 40 C.F.R. § 131.12 and have as their objective the maintenance and protection of various levels of surface water quality and uses. Antidegradation applies to all projects or activities subject to these regulations which will likely lower water quality or affect existing or designated water uses, including but not limited to all Water Quality Certification reviews and any new or modified RIPDES permits. For the disposal of dredged or fill material into the waters of the State, Guidelines for Specification of Disposal Sites for Dredged or Fill Material, 40 C.F.R. § 404(b)(1), incorporated above in § 1.3(C) of this Part, guidelines shall be followed in the evaluation of 40 C.F.R. § 131.12(a)(1), incorporated above in § 1.3(F) of this Part, and the State's Antidegradation Policy. The Antidegradation regulations consist of four (4) tiers of water quality protection.
- B. Tier 1 Protection of Existing Uses Any existing in situ water uses and level of surface water quality necessary to protect the existing uses, shall be maintained and protected.

- C. Tier 2 - Protection of Water Quality in High Quality Waters - With the exception of Outstanding National Resource Waters, in surface waters where the existing water quality exceeds levels necessary to support propagation of fish and wildlife and recreation in and on the water, that quality shall be maintained and protected, except for insignificant changes in water quality as determined by the Director and in accordance with § 1.27 of this Part. An exception to this level of protection may only be allowed if it can be proven to the Director by a preponderance of clear and scientifically valid evidence having a probative value, and the Director finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the RI Continuing Planning Process, that allowing significant water quality degradation is necessary to accommodate important economic and social benefit in the area in which the receiving waters are located. In allowing such significant degradation or lower water quality, the Director shall assure water quality adequate to fully protect existing and designated uses. In allowing a change in water quality, significant or insignificant, all reasonable measures to minimize the change shall be implemented. Adequate scientifically valid documentation shall be provided to the Director demonstrating that designated and existing uses, water quality to protect those uses, and all applicable water quality standards, will be fully protected. Further, the highest statutory and regulating requirements for all new and existing point sources and all cost-effective and reasonable best management practices for nonpoint source control shall apply.
- D. Tier 2½ Protection of Water Quality for SRPWs Where high quality waters constitute a SRPW, there shall be no measurable degradation of the existing water quality necessary to protect the characteristic(s) which cause the waterbody to be designated as an SRPW. Notwithstanding that all public drinking water supplies are SRPWs, public drinking water suppliers may undertake temporary and short term activities within the boundary perimeter of a public drinking water supply impoundment for essential maintenance or to address emergency conditions in order to prevent adverse effects on public health or safety, provided that these activities comply with the requirements set forth in § 1.20(B) of this Part (Tier 1 Protection of Existing Uses) and § 1.20(C) of this Part (Tier 2 Protection of Water Quality in High Quality Waters).
- E. Tier 3 Protection of Water Quality for ONRWs Where high quality waters constitute an Outstanding National Resource, as defined in § 1.7 of this Part, that water quality shall be maintained and protected. The State may allow some limited activities that result in temporary and short-term changes in the water quality of an ONRW. Such activities must not permanently degrade water quality or result in water quality lower than that necessary to protect the existing uses in the ONRW.
- F. Implementation The Antidegradation provisions shall be implemented in accordance with the Antidegradation Implementation Policy § 1.27 of this Part.

## 1.21 Modification of Water Quality Standards

A. Authority - The Director has the power and duty in accordance with § 1.2 of this Part and R.I. Gen. Laws § 46-12-3 to promulgate water quality standards.

- B. Request for Modification Any person may request that the Director modify a water quality standard. The request must include a preponderance of clear and scientifically valid evidence having a probative value to demonstrate that such modification is consistent with these regulations. In addition, a Use Attainability Analyses (UAA) must be conducted:
  - 1. for a request to remove a designated use specified in Section 101(a)(2) of the Clean Water Act, 33 U.S.C. § 1251; or
  - 2. to propose a subcategory of uses specified in Section 101(a)(2) of the Clean Water Act, 33 U.S.C. § 1251, which require less stringent criteria.
- C. Promulgation of Modifications If the Director determines that modification is appropriate the Director shall initiate promulgation of such modification in accordance with R.I. Gen. Laws Chapter 42-35.
- D. General Standards for Conducting the Review Water quality standards shall protect the public health, safety and welfare, enhance the quality of water and serve the purpose of the Clean Water Act.
  - 1. The Director will take into consideration the conservation, protection, use and value of the waters for public water supplies, propagation of fish and wildlife, recreational purposes, agricultural, industrial, and other purposes, and for navigation.
  - 2. The Director shall attempt to establish water quality standards which will result in the achievement of the national water quality goal specified in Secton 101(a)(2) (33 U.S.C. § 1251) of the Clean Water Act, wherever attainable. In determining whether such standards are attainable for any particular segment, the Director shall take into consideration environmental, technological, social, and economic factors.
  - Designation of uses which do not support the protection and propagation of fish and wildlife, and recreation in and on the water, Section 101(a)(2) (33 U.S.C. § 1251) of the Clean Water Act, may be granted if supported by a Use Attainability Analyses to the satisfaction of the Director.
  - 4. The Director shall take into consideration the water quality standards of downstream waters and shall assure that water quality standards provide for the attainment of the water quality standards of downstream waters.
  - 5. The Director shall adhere to the antidegradation principles of the Antidegradation Policy described in § 1.20 of this Part.
- E. Modifications of Designated Uses Modifying a designated use may result in modifying the applicable criteria of the affected/identified water segment, to criteria necessary to protect the new designated use of that affected/identified water segment. In no case may a criteria be modified if it would adversely affect existing uses or other designated uses.
  - 1. Downgrading Designated Uses

- a. In waters in which the designated use(s) is not the existing use(s), any person may request that the Director, or the Director may propose, that the designated use be downgraded, or may designate a partial use (§ 1.9(D) of this Part), only where it is demonstrated through the UAA process (except as noted in § 1.21(E)(1)(c) of this Part) by a preponderance of clear and scientifically valid evidence having a probative value to the satisfaction of the Director that attaining the designated use is not feasible because:
  - (1) Naturally occurring background pollutant concentrations or natural background conditions prevent the attainment of the use:
  - (2) Naturally occurring ephemeral, intermittent or low flow conditions or water levels not human-made or humaninduced prevent the attainment of the use, unless these conditions may be compensated for by the discharge of sufficient volume of effluent discharges without violating state water conservation requirements to enable uses to be met:
  - (3) Human-made or human-induced conditions prevent the attainment of the use and cannot be remedied per item § 1.21(E)(1)(a)(6) of this Part, or would cause more environmental damage to correct than to leave in place;
  - (4) Existing dams, diversions or other types of permitted hydrologic modifications which meet all applicable permit and/or water quality certificate requirements preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use:
  - (5) Physical conditions related to the naturally occurring features of the water body, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality and not human-made or human-induced, preclude attainment of aquatic life protection uses; or
  - (6) Controls more stringent than those required by Sections 301(b)(1)(A) and (B) (33 U.S.C. § 1311) and 306 of the Clean Water Act (33 U.S.C. § 1316) for point source dischargers, and reasonable best management practices for nonpoint source dischargers, would result in substantial and widespread economic and social impact.
- b. It must also be demonstrated to the Director's satisfaction that downgrading or altering the water quality use will not affect the quality of waters beyond the area in which §§ 1.21(E)(1)(a)((1))

- through ((6)) of this Part applies nor violate § 1.20 of this Part (Antidegradation of Water Quality Standards) of these regulations. The Director shall hold a public hearing on such downgrading requests that are determined to have merit.
- c. For the following waters, a partial use designation of SA{b} may be proposed and will not be considered a downgrade and will not require a use attainability analysis, unless the Director determines it is necessary to comply with § 1.20 of this Part (Antidegradation of Water Quality Standards):
  - (1) SA waters along the western shore of Aquidneck Island located between a straight line extending northerly from the boundary of Lots 8 and 9, Portsmouth Town Map 17 to the end of Coddington Cove Breakwater in Middletown, that extend 500 feet seaward from the mean high water mark.
  - (2) SA waters along the western shore of Warwick Neck from the southern most point of the Harbor Light Marina parking lot to the northern side of the end of Randall Street, that extend 500 feet seaward from the mean high water mark.
  - (3) SA waters along the eastern shore of Horse Neck from the eastern most extension of Burr Avenue, to the eastern most groin at Oakland Beach, that extend 500 feet seaward from the mean high water mark.
  - (4) SA waters from the northernmost point along the east bulkhead wall in the small embayment on the south side on the Allens Harbor entrance channel to the extension of a line from nun buoy 10 through FG Buoy 11 to the shore at Quonset Point, that extend 500 feet seaward from the mean high water mark.
- d. A designated use may not be downgraded if such uses will be attained by implementing effluent limits required under Sections 301(b) (33 U.S.C § 1311) and 306 (33 U.S.C. § 1316) of the Clean Water Act for point sources and by implementing cost-effective and reasonable best management practices for nonpoint source control.

#### 2. Upgrading Designated Uses

- a. Any person may request that the Director or the Director may propose to upgrade the classification of a water quality segment, including a request to designate a waterbody or waterbody segment as a Special Resource Protection Water (SRPW) or an Outstanding National Resource Water (ONRW).
- b. Where current water use classifications specify water uses less sensitive than those which are presently being achieved, the

- Director shall propose to upgrade the classification of the waters in question to reflect the uses actually being attained.
- c. The Director shall hold a public hearing on such requests that are determined to have merit.
  - (1) At the hearing, the applicant must prove by a preponderance of clear and scientifically valid evidence having probative value to the satisfaction of the Director that such a reclassification satisfies the standards of §§ 1.21(D) or 1.20 of this Part applies.
- F. Modification of Criteria Any person may request that the Director, or the Director may propose to modify an aquatic life water quality criteria. The request and development of site specific criteria shall be in accordance with § 1.29 of this Part. If the Director determines the criteria modification is appropriate, the Director shall promulgate such modification in accordance with R.I. Gen. Laws Chapter 42-35.
  - Modification of criteria of a water segment shall not result in a modification of the designated use of the water segment. Newly developed criteria must still protect the existing and designated uses of the water segment.

#### 1.22 Variances from Water Quality Standards

- A. Conditions for Granting Variances A variance from the water quality standards may be granted by the Director when the Director has a reasonable belief that the standard can ultimately be attained. A variance from meeting the standard is granted to the discharger for the particular constituent that is causing non-attainment of the standard. All other applicable criteria and standards must be met by the discharger. The criteria protective of the standard must be maintained for all other dischargers on the waterbody. A variance can be granted only under the following conditions:
  - 1. Non-attainment of the standard is attributed to one of the following:
    - a. Naturally occurring background pollutant concentrations or natural background conditions prevent the attainment of the use;
    - b. Naturally occurring ephemeral, intermittent or low flow conditions or water levels not human-made or human-induced prevent the attainment of the use, unless these conditions may be compensated for by the discharge of sufficient volume of effluent discharges without violating state water conservation requirements to enable uses to be met:
    - c. Human-made or human-induced conditions prevent the attainment of the use and cannot be remedied per § 1.22(A)(1)(f) of this Part, or would cause more environmental damage to correct than to leave in place;

- d. Existing dams, diversions or other types of permitted hydrologic modifications which meet all applicable permit and/or water quality certificate requirements preclude the attainment of the use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use;
- e. Physical conditions related to the naturally occurring features of the waterbody, such as the lack of a proper substrate, cover, flow, depth, pools, riffles, and the like, unrelated to water quality and not human-made or human-induced, preclude attainment of aquatic life protection uses; or
- f. Controls more stringent than those required by Sections 301(b)(1)(A) and (B) (33 U.S.C. § 1311) and § 306 (33 U.S.C. § 1316) of the Clean Water Act for point source dischargers, and reasonable best management practices for nonpoint source dischargers, would result in substantial and widespread economic and social impact.
- 2. Treatment more advanced than that required by section 301(b)(1)(A) and (B) (33 U.S.C. § 1311) has been carefully considered, and that alternative effluent control strategies have been evaluated.
- B. Time Limit for Variances Variances from the water quality standards shall be for a specific period of time not to exceed three (3) years. A variance may be reinstated only upon demonstration that the conditions for granting the variance still apply and reasonable progress toward meeting the standard has been made.
- C. Public Notice The Director may grant a variance, in accordance with this rule, only after public notice, opportunity for comment and a public hearing, in accordance with R.I. Gen. Laws Chapter 42-35.
- D. Variances for RIPDES Permitted Discharges Those persons holding a RIPDES permit, or applying for a RIPDES permit, must request a variance in accordance with the Regulations for the Rhode Island Pollutant Discharge Elimination System RIPDES.
- E. Compliance With Other Water Quality Regulations Issuance of a variance pursuant to this rule does not relieve the holder of the variance from complying with requirements of these regulations which have not been the subject of a variance.

# 1.23 Appeals

A. General - The procedures for appeal of Departmental decisions pursuant to the provisions of R.I. Gen. Laws Chapter 42-35 are contained in Part 10-00-1 of this Title.

- B. Appeal Procedures for Applications for Orders of Approval and Water Quality Certifications The applicant may appeal to the Director for review of the decision on an application for approval by filing an appeal with DEM/Administrative Adjudication.
  - Filing of Appeal All appeals shall be in writing and shall be filed with and received by DEM/Administrative Adjudication within thirty (30) days after the effective date of the denial of the subject application.
  - 2. Contents of Appeal Every appeal shall comply in all respects with Part 10-00-1 of this Title and at a minimum contain the following:
    - a. A detailed basis upon which the appeal is taken;
    - b. A plat plan of the area of the subject application; and
    - c. A list of the names and addresses of the applicant, the municipality in which the property is located and all abutters.
  - 3. Notice of Administrative Hearing Upon the filing of an appeal with DEM/ Administrative Adjudication, and once the hearing schedule allows, DEM/Administrative Adjudication shall notify the following, by first class mail, of the date, time and place of the adjudicatory hearing, in conformance with R.I. Gen. Laws § 42-35-9:
    - a. The applicant,
    - b. The municipality in which the property is located,
    - c. All abutters and all other persons who received notice pursuant to § 1.17(D)(1) of this Part.
- C. Appeal Procedure for Notice of Violations, Suspensions or Revocations Any person who has received a Notice of Violation (NOV) alleging violation of these regulations, or whose approval has been suspended or revoked, may appeal to the Director for review of the decision on which the NOV, suspension or revocation is based by filing an appeal with DEM/Administrative Adjudication.
  - Filing of Appeal All appeals shall be in writing and shall be filed with and received by DEM/Administrative Adjudication within twenty (20) days after the date of the receipt of the subject NOV, revocation or suspension.
  - 2. Contents of Appeal Every appeal shall contain a detailed basis upon which the appeal is taken.

## 1.24 Sampling

A. Water Quality Testing - Surface water samples shall be collected, preserved, and analyzed in accordance with 40 C.F.R. § 136, incoprorated above in § 1.3(A) of this Part, Guidelines establishing Test Procedures for the Analysis of Pollutants. Other methods recommended by the EPA may be used, if legally acceptable.

B. Bioassays - Bioassays shall be performed in accordance with protocols listed in 40 C.F.R. § 136, incorporated above in § 1.3(A) of this Part, and Methods for Measuring the Toxicity and Bioaccumulation of Sediment-associated Contaminants with Freshwater Invertebrates, incorporated above in § 1.3(B) of this Part, or other methods if approved by the Director and legally acceptable. A more detailed explanation of state requirements pertaining to bioassays is given in the most recent RIDEM bioassay protocol.

#### 1.25 Water Quality Classifications

- A. General This waterbody classification listing is consistent with the geographical/numerical waterbody listing in the State of the State's Waters Report, also known as the 305(b) Report. The waters included generally conform to those shown on United States Geological Survey 1:24,000 Topographic Maps and National Oceanic and Atmospheric Administration Nautical Charts (various scales). At a minimum, all major rivers and river segments greater than 1 mile in length, ponds 10 acres and larger (terminal drinking water reservoirs less than 10 acres are retained), and estuarine waters are included in this listing. To determine the classification for waterbodies which are not listed, follow the General Water Quality Classification Rules listed below and in § 1.9(E) of this Part.
- B. Coldwater/Warmwater Fisheries Freshwater rivers and streams, and lakes and ponds are designated as coldwater, warmwater or unassessed based upon the potential for the presence of brook trout by evaluating current and historical presence/absence information, habitat, water quality and physical characteristics data. Where coldwater fish exist in waters not yet designated as coldwater, the coldwater fish and habitat will be protected as an existing use.
- C. The following is a list of symbols used in the water quality classification listing:
  - 1. # Located next to the Waterbody ID number, the # indicates a segment where the Water Effect Ratios (WERs) and Site Specific Criteria (See § 1.26 of this Part) apply.
  - 2. @ Located next to the Waterbody ID number identifies the terminal reservoir of the public drinking water supply.
  - 3. \* Located next to the Waterbody ID number identifies a closed safety zone.
  - 4. {a} Located next to the classification, {a} indicates a partial use designation due to impacts from CSOs.
  - 5. {b} Located next to the classification, {b} indicates a partial use designation due to impacts from a concentration of vessels.
- E. Blackstone River Basin, Waterbody ID number Rl0001
  - 1. Wallum Lake & Tributaries Subbasin, Waterbody ID number RI0001001

## 1.26 RIDEM Ambient Water Quality Criteria and Guidelines for Toxic Pollutants

- General Section 304(a)(1) of the Clean Water Act, 33 U.S.C. § 1314, requires Α. the USEPA to develop and publish water quality criteria. The USEPA has published criteria for a number of the pollutants listed pursuant to Section 307(a)(1) of the Clean Water Act, 33 U.S.C. § 1317, as well as for other toxic substances, based on available toxicological information on the pollutants. Section 303(c)(2)(B) of the Clean Water Act, 33 U.S.C. § 1313, requires States to adopt numeric criteria to protect the uses of their waters from all toxic pollutants listed pursuant to Section 307(a)(1) (33 U.S.C. § 1317) for which criteria have been published pursuant to Section 304(a)(1) (33 U.S.C. § 1314), and which are present, or could reasonably be expected to be present, at levels that would impair the uses. A complete list of "priority pollutants" is contained in 40 C.F.R. § 423, incorporated above in § 1.3(G) of this Part. § 1.26 of this Part contains the ambient chemical-specific numeric criteria and guidelines for aquatic life and human health which satisfies the requirements of Section 303(c)(2)(B) (33 U.S.C. § 1313). Certain criteria in the table have been modified and approved by EPA in accordance with applicable EPA guidance.
- B. § 1.26(J) of this Part contains the acute and chronic aquatic life criteria and minimum data base guidelines for freshwater and saltwater and two sets of human health criteria.
  - The first column of human health criteria represents criteria applicable to waters where the designated route of exposure is due to consumption of drinking water and aquatic organisms.
  - 2. The second column under human health represents criteria applicable to waters where the designated route of exposure is due only to consumption of aquatic organisms.
- C. For parameters which have both aquatic life and human health criteria or guidelines, the applicable criteria or guideline is determined by using the more stringent of the aquatic life or human health criteria or guidelines, according to the use of the waterbody.
- D. Aquatic Life Criteria The aquatic life criteria in § 1.26(J) of this Part represents the EPA water quality criteria for the protection of aquatic life, pursuant to Section 304(a) of the Clean Water Act, 33 U.S.C. § 1314, for acute and chronic exposure to toxics in freshwater and saltwater. These toxics are priority metals, organics, pesticides, PCBs, and cyanide.
  - To protect aquatic life, the one hour average concentration of a pollutant should not exceed the acute criteria more than once every three years on the average.
    - a. An exclusion to this rule are the pesticides and PCBs acute criteria which are considered instantaneous values (§§ 1.26(J)(1) of this Part 1.26(J) of this Part).

- 2. The four day average concentration of a pollutant should not exceed the chronic criteria more than once every three years on the average.
- 3. These aquatic life criteria shall be achieved in all waters, except mixing zones, regardless of the waters' classification.
- 4. The acute and chronic aquatic life criteria for freshwaters shall not be exceeded at or above the lowest average 7 consecutive day low flow with an average recurrence frequency of once in 10 years (7Q10).
- 5. For non-flowing freshwaters, the acute and chronic aquatic life criteria shall not be exceed under the most adverse conditions which will be determined on a case-by case basis.
- 6. The acute and chronic aquatic life criteria for seawater shall not be exceeded beyond the boundary of the mixing zone(s), as defined and determined by §§ 1.10(B)(5) and 1.10(B)(6) of this Part, and thence throughout the waterbody.
  - a. If a mixing zone has not been established, these criteria shall not be exceeded in any portion of the receiving water.
- 7. For purposes of calculating freshwater aquatic life criteria for metals from the equations in § 1.26(M) of this Part, the ambient hardness values shall be used, and shall be consistent with the design flow conditions established by § 1.10 of this Part.
- 8. For waters in which the salinity is equal to or less than one part per thousand, the applicable criteria are the freshwater criteria.
- 9. For waters in which the salinity is equal to or greater than ten parts per thousand, the applicable criteria are the saltwater criteria.
- 10. For waters in which the salinity is between one and ten parts per thousand (brackish), the applicable criteria are the more stringent of the freshwater or saltwater criteria. However, for those waters between one and ten parts per thousand (brackish), the Department may deviate from the general rule if scientifically defensible information and data demonstrates that on a site-specific basis the biology of the waterbody is dominated by freshwater aquatic life and that freshwater criteria are more appropriate; or conversely, the biology of the waterbody is dominated by saltwater aquatic life and that saltwater criteria are more appropriate.
- 11. The acute and chronic freshwater criteria for 10 metals and the acute and chronic saltwater criteria for 11 metals listed in § 1.26(J) of this Part are presented as dissolved metal criteria (see #5 and #6 § 1.26(J)(1) of this Part). For these metals, the dissolved metal, as opposed to the total recoverable metal, more closely approximates the bioavailable fraction of the metal in the water column.

- E. Human Health Criteria The human health criteria in § 1.26(J) of this Part represent the highest concentration of a pollutant in surface waters that is not expected to pose a significant risk to human health as determined by EPA. For almost all of the pollutants, bioaccumulation properties are used to assess the relative extent of human exposure to the pollutant either directly through ingestion or indirectly through consumption of aquatic organisms. These criteria represent the chronic criteria necessary to protect human health.
  - 1. Ambient water quality criteria for human health are primarily based on two types of biological endpoints:
    - a. Carcinogenicity and;
    - b. Toxicity (i.e., all other adverse effects other than cancer).
  - 2. There are essentially two procedures for assessing health effects; one which addresses carcinogens and one which addresses non-carcinogens. The reason for having two methodologies is that, for the purpose of deriving ambient water quality criteria, carcinogenicity is regarded as a non-threshold phenomenon, whereas toxicity is regarded as having a threshold below which there will not be an effect.
    - a. For those toxic substances which are identified as carcinogens, the criteria have been established at a risk level of 10-5 assuming a lifetime exposure to a 70 kg male consuming 17.5 grams per day of fish and shellfish product and ingesting 2.0 liters of water per day.
    - b. For those toxic substances which are identified as non-carcinogens, the human health criteria are best estimates of concentrations which are not expected to produce adverse effects in human health assuming a lifetime exposure of a 70 kg male consuming 17.5 grams per day of fish and shellfish products and ingesting 2.0 liters of water per day.
  - 3. The concentration of these pollutants should not exceed criteria under stream conditions that represent long-term average conditions.
    - a. The stream design flow to be used to implement both carcinogen and noncarcinogen human health criteria is the harmonic mean flow which is a long term mean flow value calculated by dividing the number of daily flows analyzed by the sum of the reciprocals of those daily flows.
    - b. For non-flowing freshwaters, the human health criteria shall not be exceed under the most adverse conditions which will be determined on a case-by case basis.
  - 4. For seawaters, the ambient human health water quality criteria for carcinogens and non-carcinogens are applicable when the most adverse

hydrographic and pollution conditions occur at the particular point of evaluation.

- F. Ammonia Criteria The criteria presented in § 1.26 (L) of this Part represent the ammonia criteria for aquatic life use.
  - 1. Averaging Periods and Frequency of Exceedances
    - a. Chronic criteria The ambient concentration, averaged over a period of 30 days, shall not exceed the chronic criterion more than once every three years on average. The highest four-day average ambient concentration should not exceed a concentration 2.5 times greater than the chronic criterion.
    - Acute The ambient concentrations, averaged over one hour shall not exceed the acute criterion more than once every three years on average.
  - 2. Early Life Stage Absent (ELS-Absent) Provision
    - a. This provision allows for a relaxation of the chronic criteria when early life stages (ELS) of fish are not present, since at low ambient water temperatures, adult and juvenile fish are less sensitive to ammonia toxicity than are early life stages of fish. As ambient water temperature decreases, it is appropriate to relax the ammonia chronic criterion in waterbodies where it is determined, to the Director's satisfaction, that early life stages are not present. The chronic criteria applicable when ELS are absent are found in § 1.26(L)(1)(c) of this Part.
    - b. The Director has determined that the ELS-Absent Provision applies to:
      - (1) The entire Blackstone River during the period November 1 to April 30.
      - (2) The main stem of the Pawtuxet River during the period November 1 to April 30.
      - (3) The Woonasquatucket River from Georgiaville Pond to the confluence with the Mosshasuck River during the period November 1 to April 30.

#### G. Site Specific Criteria

1. Criteria, 40 C.F.R. § 131.11(b)(1)(ii) provides States with the opportunity to adopt water quality criteria that are modified to reflect local environmental conditions. Certain criteria are developed as site specific criteria in accordance with State and EPA procedures and guidance.

- a. Aquatic life criteria may be subject to site-specific modification procedures. Aquatic life guidelines may be modified following the procedures outlined in § 1.26(H) of this Part.
  - (1) Aquatic life site specific criteria modification procedures are based on EPA's "Interim Guidance on Determination and Use of Water Effect Ratios for Metals, EPA-823-B-94-001, February 1994, and subsequent site specific criteria modification guidance documents published in a memo from Jeanette Wiltse, Director of EPA's Health and Ecological Criteria Division on December 3, 1997; and EPA's Streamlined Water Effect Ration Procedure for Discharges of Copper, EPA-822-R-01-005, March 2001.
- b. Human health criteria are subject to site-specific criteria development utilizing the methodology in EPA guidance. Human health guidelines may be modified utilizing the methodology in the EPA guidance manual, "Assessing Human Health Risk from Chemically-Contaminated Fish and Shellfish" (EPA 503/8-89-002), incoporated in § 1.3 of this Part, and the methodology published in the Federal Register on November 28, 1980 (45 FR 79347) entitled "Water Quality Criteria Documents; Availability, Appendix C Guidelines and Methodology used in Preparation of Health Effect Assessment Chapters of the Consent Decree Water Criteria Documents," incorporated above in § 1.3(E) of this Part
- Water Effect Ratios (WERs) were developed for 5 metals; cadmium, copper, lead, silver and zinc for portions of the Pawtuxet River (§ 1.26(M) of this Part) using total recoverable metals. The WERs are then used to derive acute site specific criteria for the State's aquatic life criteria as indicated in § 1.26(M) of this Part. Chronic site specific criteria are then calculated using the derived acute site specific criteria, as indicated in § 1.26(M) of this Part.
  - a. The resulting acute and chronic site specific criteria are as total recoverable metals. The conversion factors noted in § 1.26(J)(3) and § 1.26(K) of this Part cannot be applied to the site specific criteria.
  - b. The WERs and resulting site specific criteria apply only to the segments of the Pawtuxet River classified as B1 (§ 1.25 of this Part)
  - c. The WERs were developed using the procedures outlined in § 1.29 of this Part and EPA's "Interim Guidance on Determination and Use of Water Effect Ratios for Metals" (EPA 823-B-94-001).
- 3. Site specific dissolved copper criteria have been adopted for the Blackstone River, Ten Mile River (including run-of-the-river impoundments Slater Park Pond, Turner Reservoir North and South, and Omega Pond),

and the Woonasquatucket River from the Smithfield WWTF discharge to the mouth of the river (§ 1.26(J) of this Part).

- H. Freshwater Minimum Data Base Guidelines RIDEM has derived freshwater guidelines for many pollutants for which EPA water quality criteria are not available. In order for guidelines to be derived, the toxicity data base for the pollutants must meet minimum requirements. These guidelines are given in § 1.26(J) of this Part and are marked with an asterisk (\*), which is in § 1.26(J)(1) of this Part. The data base must contain at least two acute toxicity test results expressed as either an EC50 or an LC50. The two acute toxicity test results shall consist of:
  - 1. One daphnid (*D. magna* or *D. pulex*)
  - 2. One fish, either:
    - a. fathead minnow (*Pimephales promelas*)
    - b. bluegill (*Lepomis macrochirus*)
    - c. rainbow trout (Salmo gairdneri)
  - 3. For every pollutant which meets these minimum data requirements, acute and chronic guidelines are derived using the following equations:

Lowest LC50 or EC50 x 0.05 = Acute Guideline

Acute Guideline ÷ 45 = Chronic Guideline

- a. The uncertainty factor, 0.05, is intended to provide an adequate margin of safety to protect most aquatic organisms from acutely toxic effects.
- b. The acute guideline is divided by an acute to chronic ratio of 45 to yield the chronic guideline.
- I. Priority Pollutants Without Criteria or Guidelines Any pollutant listed on the most recent EPA priority pollutant list published in accordance with Section 307(a)(1) of the Clean Water Act, 33 U.S.C. § 1317 (listed in 126 Priority Pollutants, 40 C.F.R. § 423, incorporated above in § 1.3(G) of this Part) or additional criteria EPA has established for non-priority pollutants, for which there is no RIDEM ambient water quality criteria or guideline, shall be regulated in accordance with §§ 1.8(D)(2) and (3) of this Part.

J. Table of Acute and Chronic Aquatic Life Criteria and Minimum Database Guidelines for Freshwater and Saltwater and Human Health Criteria

1. Priority Pollutant: Toxic Metals and Cyanide

| CHEMICAL<br>NAME       | CAS<br>Number | AQUATI | C LIFE CRIT      | ERIA (µg. | /I)     | CARCINOGEN | HUMAN HEALTH<br>CRITERIA (µg/l) <sup>2</sup> |                              |
|------------------------|---------------|--------|------------------|-----------|---------|------------|--|------------------------------|

| Symbol | Meaning  |
| *      | RIDEM minimum database guidelines.   |
| **     | Only data generated in toxicity and bioconcentration tests on TBTCI (tributyltin chloride; CAS 1461-22-9), TBTF (tributyltin floride; CAS 1983-10-4), TBTO [bis(tributyltin) oxide; CAS 56-35-9], commonly called "tributyltin oxide" and TBTS[bis(tributyltin) sulfide; CAS 4808-30-4], commonly called "tributyltin sulfide" were used in the derivation of the water quality criteria concentrations for aquatic life presented herein. All concentrations from such tests are expressed as TBT, not as tin and not as the chemical tested. |
| ^      | Freshwater criteria for aluminum are for waters in which the pH is between 6.5 and 9   |
| #      | See § 1.26(L) of this Part for ammonia criteria  |
| @      | See § 1.26(K) of this Part for criteria equations  |
| -      | No criteria recommendation.  |
| \$     | The aquatic life criteria for these compounds were issued in 1980 utilizing the 1980 Guidelines for criteria development. The acute values shown are final acute values which, by the 1980 Guidelines, are instantaneous values as contrasted with a Criteria Maximum Concentration (CMC)which is a one-hour average.  |
| 1      | Carcinogens calculated at 10-5 risk  |
| 2      | Criteria are in µg/l unless otherwise noted: µg/l = micrograms/liter, ng/l = nanograms/liter, mg/l = milligrams/liter  |
| 3      | Polychlorinated Biphenyl criteria apply to total PCBs (e.g. the sum of all cogener or all isomer or homolog or Aroclor analyses.)  |
| 4      | Polycyclic Aromatic Hydrocarbons criteria apply to each of the following: indeno(1,2,3-cd)pyrene (CAS Number 193395), dibenzo(ah)anthracene (CAS Number 53703), benzo(a)anthracene (CAS Number 56553), benzo(a)pyrene (CAS Number 50328), benzo(b)fluoranthene (CAS Number 205992), benzo(k)fluoranthene (CAS Number 207089), chrysene (CAS Number 218019)   |

| 5 | Freshwater aquatic life criteria values in § 1.26(J) of this Part for the following parameters are presented as dissolved criteria using the EPA recommended conversion factors (CF), as listed in § 1.26(J)(2) of this Part  |
|---|---|
| 6 | Saltwater aquatic life criteria values in § 1.26(J) of this Part for the following parameters are presented as dissolved criteria using the EPA recommended conversion factors, as listed in § 1.26(J)(3) of this Part  |
| 7 | Site specific criteria for dissolved copper apply for the following waters: Blackstone River (Rl0001003R-01A and Rl0001003R-01B) From the MA/RI border to the mouth of the river, Ten Mile River (Rl0004009R-01A and Rl0004009R-01B) From the MA/RI border to the mouth of the river including Slater Park Pond (included in Ten Mile River (Rl0004009R-01A), Turner Reservoir North (Rl0004009L-01A) and South (Rl0004009L-01B), and Omega Pond (Rl0004009L-03). Woonasquatucket River (Rl0002007R-10C and Rl0002007R-10D) From the Smithfield WWTF discharge to confluence with Moshassuck River. |

8. Table of EPA Recommended Conversion Factors (CF)-Freshwater Values

| Metal          | Acute CF                       | Chronic CF                     |
|----------------|--------------------------------|--------------------------------|
| Arsenic        | 1.000                          | 1.000                          |
| Cadmium        | 1.136672 - [(ln H) x 0.041838] | 1.101672 - [(ln H) x 0.041838] |
| Chromium III   | 0.316                          | 0.86                           |
| Chromium<br>VI | 0.982                          | 0.962                          |
| Copper         | 0.96                           | 0.96                           |
| Lead           | 1.46203 - [(ln H) x 0.145712]  | 1.46203 - [(ln H) x 0.145712]  |
| Mercury        | 0.85                           | 0.85                           |
| Nickel         | 0.998                          | 0.997                          |
| Silver         | 0.85                           | (no freshwater criteria)       |
| Zinc           | 0.978                          | 0.986                          |

NOTE: (In H) = natural log of Hardness, using any hardness as appropriate.

#### 9. Table of EPA Recommended Conversion Factors (CF)-Saltwater Values

| Metal        | Conversion Factor       |
|--------------|-------------------------|
| Arsenic      | 1                       |
| Cadmium      | 0.994                   |
| Chromium III | (no saltwater criteria) |
| Chromium VI  | 0.993                   |
| Copper       | 0.83                    |
| Lead         | 0.951                   |
| Mercury      | 0.85 (see Note below)   |
| Nickel       | 0.99                    |
| Selenium     | 0.998                   |
| Silver       | 0.85                    |
| Zinc         | 0.946                   |

Note: Conversion factors on this table were calculated for acute criteria only. Conversion factors for chronic criteria are not currently available. In the absence of chronic conversion factors saltwater acute conversion factors are used. Chronic criteria for mercury cannot be converted to dissolved because it is based on mercury residues rather than toxicity.

# 1.27 The Implementation of the Antidegradation Provisions of the Rhode Island Water Quality Regulations

- A. Introduction Antidegradation Standard
  - 1. § 1.20 of this Part is based on the Federal Antidegradation Policy requirements, 40 C.F.R. § 131.12 and adopted under the authority of R.I. Gen. Laws Chapters 46-12, 42-17.1 and 42-35.
  - 2. Antidegradation is one of the minimum elements required in state water quality standards. The provisions of the State Antidegradation Regulations have as their objective the maintenance and protection of various levels of water quality and uses.
  - 3. The Rhode Island Antidegradation provisions consist of four (4) tiers of water quality protection which are defined in general terms in § 1.20 of this Part.
- B. Applicability Antidegradation applies to all new or increased projects or activities which may lower water quality or affect existing water uses, including but not limited to all 401 Water Quality Certification reviews and any new, reissued, or modified RIPDES permits. This Antidegradation Implementation Policy describes the general strategy the State will use to determine on a case-by-case basis whether, and to what extent, water quality may be lowered.
- C. Preconditions for Implementation of Antidegradation Procedures

- 1. At the onset of the antidegradation review, a determination by the State, of whether the proposed activity can be considered a new or increased activity, must be made.
  - A new activity in terms of application of this Antidegradation Implementation Policy shall refer to any activity which commenced after November 28, 1975.
  - b. An increased activity shall refer to:
    - (1) A proposed increase in loadings to a waterbody.
    - (2) For discharges covered by existing RIPDES permits an evaluation of an increased loading shall constitute a comparison of the present permit limit with the newly calculated permit limit. If the new permit limit is less than or equal to the old limit, it would not be considered an increased activity. If the comparison indicates that the new permit limit is greater than the old limit, it would be considered an increased activity.
    - (3) An increase in a flow alteration over the existing use.
- 2. If the above evaluations result in a determination that the proposed activity is not a new or increased activity, then there would be no further review of the proposed activity under the Antidegradation Implementation Policy. If the above evaluations result in a determination that the proposed activity is a new or increased activity, then the activity will be reviewed for consistency with this Antidegradation Implementation Policy.
- D. Antidegradation Protections for Tier 1 and Tier 2
  - 1. Tier 1 Protection of Existing Uses
    - a. General This provision applies to all surface waters.
      - (1) An existing use can be established by demonstrating that a use(s) has actually occurred since November 28, 1975, and the water quality is suitable to allow the existing use or;
      - (2) By demonstrating that although a designated use(s) has not occurred the water quality is suitable to allow such a use(s) to occur, unless there are physical problems which prevent the use and which cannot be remedied.
    - b. Under Tier 1, a proposed activity or discharge cannot partially or completely eliminate any existing uses nor the water quality needed to maintain and protect those uses.

- The proposed activity cannot violate the class-specific criteria for minimum water quality of the assigned water quality standard of a waterbody.
  - (1) The more stringent of instream aquatic life criteria or applicable human health criteria for toxic pollutants must be met in all waters, regardless of the classification.
- d. The Department may make requests for evidence/data for applications of proposed activities or discharges in accordance with § 1.27(E)(3) of this Part.
- 2. Tier 2 Protection of Water Quality in High Quality Waters
  - a. General In a waterbody where, for any parameter, the existing water quality exceeds that level necessary to support the propagation of fish and wildlife and recreation in and on the waters, regardless of the use designation, that water shall be considered high quality for that parameter.
    - (1) All parameters do not need to be better quality than the ambient criteria for the water to be deemed a "high quality water". Instead, a waterbody is assessed as being high quality on a parameter-by-parameter basis.
  - b. That high quality shall be maintained and protected, except for insignificant changes in water quality as determined by the Director and in accordance with § 1.27(E) of this Part.
  - c. Significant changes in water quality may be allowed if it can be proven to the Director by a preponderance of clear and scientifically valid evidence having a probative value, and the Director finds, after full satisfaction of the intergovernmental coordination and public participation provisions of the RI Continuing Planning Process, that allowing the water quality degradation is necessary to accommodate important economic and social benefit in the area in which the receiving waters are located § 1.27(E)(5) of this Part.
    - (1) In allowing any such significant change in water quality, the Director shall assure water quality adequate to fully protect existing and designated uses.
  - In allowing a change in water quality, significant or insignificant, all reasonable measures to minimize the change shall be implemented.
    - (1) Adequate scientifically valid documentation shall demonstrate that existing and designated uses, water quality

- to protect those uses, and all applicable water quality standards, will be fully protected.
- (2) Achievement of the highest statutory and regulatory requirements for all new and existing point sources and all cost effective and reasonable best management practices for nonpoint source controls, shall be assured.
- 3. Special Resource Protection Water If the waterbody is a Special Resource Protection Water (SRPW), a special subset of High Quality Waters, additional requirements appear in Tier 2½ of this Antidegradation Policy.
- 4. Outstanding National Resource Water If the waterbody is an Outstanding National Resource Water (ONRW), a special subset of High Quality Waters, additional requirements appear in Tier 3 of this Antidegradation Policy.
- E. Assessment Process for Determining Special Resource Protection and Outstanding National Resource Waters
  - 1. Assess waterbody for high quality on a parameter-by-parameter basis:
    - a. Characterize the existing instream water quality and compare to the State's instream water quality criteria to assess for high quality water on a parameter-by-parameter basis.
      - (1) Instream water quality is characterized by the applicable flows associated with the most adverse conditions as stated in § 1.10(C) of this Part, background water quality levels (as determined by the Director), and all point source loadings and nonpoint source contributions and in accordance with § 1.12(B) of this Part.
      - (2) If this analysis indicates that the water is not high quality, then Tier 1 of the policy is the applicable level of protection.
      - (3) If this analysis indicates that the water is high quality, then continue with the Tier 2 antidegradation evaluation.
  - 2. Define the remaining assimilative capacity of the receiving water:
    - a. The remaining assimilative capacity or buffer of the receiving water is equivalent to the difference between the State's instream water quality criteria and the existing instream water quality.
  - 3. Request and obtain evidence/data for applications involving activities potentially impacting High Quality Waters:

- a. If it is determined that a high quality water is involved in a request for an approval of a discharge or other activity, and sufficient supplemental data is not available, RIDEM may request that the applicant provide, at a minimum, the following information prepared by a qualified professional. All engineering analyses and documentation must be prepared, stamped, and signed by a professional engineer registered in the State pursuant to R.I. Gen. Laws Chapter 5-8. All biological and scientific analyses and documentation shall be prepared by individuals qualified in the scientific field.
  - (1) Adequate recent instream water quality data, and engineering analyses to calculate probable water quality impacts due to the discharge or activity, and evidence that the existing instream water uses, and the level of water quality necessary to protect those uses will be maintained and protected.
  - (2) Adequate scientific/engineering-based evidence describing the magnitude and duration of any lowering of water quality due to the discharge or activity by itself, and in combination with other discharges or activities presently occurring. Such evidence must also show that all water quality criteria applicable to the High Quality Water in question will not be violated.
  - (3) All documentation required by any other applicable RI Water Quality Regulation or which the Director determines is necessary.
  - (4) Where RIDEM determines that the information/documentation provided by the applicant is insufficient to make a valid determination, the Department has the authority to require additional information from the applicant before a decision is made. Failure to provide the required information shall result in denial of all approvals for the activity or discharge.
- 4. Determine if the discharge or activity will significantly impact the waterbody:
  - a. For any water quality parameter, increments of water quality within any High Quality Water which exceed the minimum water quality criteria of that water's assigned water quality standard. Degradation of water quality increments by the applicant shall only be allowed if the extent of degradation expected can be adequately documented, and it can be demonstrated by the applicant through full intergovernmental coordination and public participation process that

the discharge or activity is necessary to achieve important economic or social benefit to the State, as required in § 1.27(D)(2) of this Part.

- Any new or increased discharge or activity could lower existing water quality and thus require the important benefit demonstration. RIDEM will:
  - (1) Evaluate applications on a case-by-case basis, using BPJ and all pertinent and available facts, including scientific and technical data and calculations as provided by the applicant; and
  - (2) Determine whether the incremental loss is significant enough to require the important benefits demonstration described below.
- c. Some of the considerations which will be made to determine if an impact is significant in each site specific decision are:
  - (1) Percent change in water quality parameter value and their temporal distribution;
  - (2) Quality and value of the resource;
  - (3) Cumulative impact of discharges and activities on water quality to-date;
  - (4) Measurability of the change;
  - (5) Visibility of the change;
  - (6) Impact on fish and wildlife habitat; and
  - (7) Impact on potential and existing uses.
- d. As a general guide, any discharge or activity which consumes greater than 20% of the remaining assimilative capacity § 1.27(E)(2) of this Part will be considered a significant impact and will be required to demonstrate important economic or social benefits to justify the activity § 1.27(E)(5) of this Part.
- e. Any proposed percent consumption of the remaining assimilative capacity may be deemed significant and invoke full requirements to demonstrate important economic or social benefits.
- 5. Demonstration that the discharge or activity is necessary to achieve important economic or social benefits to the State:

- a. When the Department determines from BPJ and documentation provided by the applicant that a proposed new or increased discharge or activity would result in a significant impact to the existing water quality of a High Quality waterbody, the Department requires that the applicant demonstrate by a preponderance of clear and scientifically valid evidence having a probative value that the discharge or activity is necessary to achieve important economic or social benefits to the State. The applicant shall submit evidence to the Department, including but not limited to:
  - (1) Adequate scientific and technical evidence describing the magnitude and duration of the lowering of water quality.
  - (2) Adequate evidence detailing the extent of the important economic or social benefits that will accrue to the State from the proposed activity.
  - (3) Adequate scientific and technical evidence which demonstrates that the discharge or activity is necessary and methods of alternative production, alternative methods of treatment, or alternative sites for the activity will not achieve the important social or economic benefits.
- b. Where RIDEM determines that the information/documentation provided by the applicant is insufficient to make a valid determination, the Department has authority to require additional information from the applicant before a decision is made.
- c. Upon receipt and review of the applicant's antidegradation socioeconomic benefits demonstration, the Department may either determine that the significant change in water quality is not necessary to provide important economic or social benefit and deny the proposed new or increased discharge, or tentatively accept the demonstration and provide the opportunity for public comment on the action that may lower water quality in a high quality waterbody. The public participation requirement will be met by providing the public with the opportunity to comment and the opportunity to request a public hearing § 1.27(E)(6) of this Part.

### 6. Public Participation

a. When the Department determines that a proposed new or increased discharge or activity would result in either significant or insignificant impacts to the existing water quality of any High Quality waterbody, the Department will cause and approve public notice to be given by the applicant, in accordance with R.I. Gen. Laws Chapter 42-35, and said notice shall include:

- (1) description of the proposed activity;
- (2) Statement of the State's antidegradation policy and how the activity complies with the State's policy;
- (3) A determination that existing uses will be maintained and protected;
- (4) Summary of the expected water quality impact;
- (5) Summary of the important economic or social benefits to the State.
- (6) The notice shall invite written comments to be submitted to DEM, Water Resources, and shall provide an opportunity to request a public hearing.
- b. For RIPDES permit related activities, this public notice may be a part of the normal public participation procedures involved with the issuance of a RIPDES permit.
- c. Intergovernmental coordination and review will be fulfilled by submitting a copy of the public notice to the following agencies, requesting comment to be submitted to DEM, Water Resources by the public comment deadline.

## d. State Agencies

(1) Governor's Policy Planning Office; RI Division of Statewide Planning, Department of Administration; RI Water Resources Board; RI Department of Economic Development; RI Office of Drinking Water Quality, Department of Health; RI Coastal Resources Management Council (as applicable).

### e. Federal Agencies

- (1) US EPA Region I; US Army Corps of Engineers; US Fish and Wildlife Service; National Marine Fisheries Service; National Park Service (as applicable).
- (2) Once all public comment has been received (following the comment deadline), the Director of RIDEM or the Director's designee will respond to all significant comments. If significant evidence of need in terms of public interest, significant new technical information, or significant and valid disagreement as to technical conclusions exist, the Director or the Director's designee will hold a public hearing.

- (3) Following this public participation process, the Director or the Director's designee will render a decision as to the allowance or denial for such activity to take place. If the application is denied, the applicant may revise the submittal to decrease or eliminate the projected impact to High Quality Waters, and resubmit the application for consideration under the full review process.
- F. Antidegradation Protections for Tier 2½ and Tier 3
  - 1. Tier 2½ Protection of Water Quality for SRPWs
    - a. Special Resource Protection Waters (SRPWs) are a special subset of High Quality Waters. SRPWs are subject not only to Tier 2 protection but also special protection under Tier 2½ of the Antidegradation Policy. Waterbodies which have been designated as SRPWs are listed in § 1.28 of this Part.
    - b. Under Tier 2½, there shall be no measurable degradation of the existing water quality necessary to protect the characteristic(s) which cause the waterbody to be designated as a SRPW. The new or increased discharge or activity will not be allowed unless the applicant can provide adequate scientific and technical documentation and engineering plans which can prove, to the satisfaction of the Director, that specific pollution controls and/or other mitigation measures and BMPs will completely eliminate any measurable impacts to water quality necessary to protect the characteristics which cause the waterbody to be designated a SRPW.
    - c. If the RIDEM, using BPJ and scientific and technical knowledge of proper modern pollution control engineering practices, agrees that the specified pollution controls and/or BMPs will protect the SRPW from all measurable degradation, those agreed-to measures will be conditions required of the applicant in an approval. Any avoidance of such conditions by the applicant will result in automatic revocation of the approval and potential enforcement action. The burden of proof rests on the applicant.
    - d. Notwithstanding that all public drinking water supplies are SRPWs, public drinking water suppliers may undertake temporary and short term activities within the boundary perimeter of a public drinking water supply impoundment for essential maintenance or to address emergency conditions in order to prevent adverse effects on public health or safety, provided that these activities comply with the requirements set forth in § 1.20(B) of this Part (Tier 1 Protection of Existing Uses) and § 1.20(C) of this Part (Tier 2 Protection of Water Quality in High Quality Waters).

- 2. Tier 3 Protection of Water Quality for ONRWs
  - Outstanding National Resource Waters (ONRWs) are a special subset of High Quality Waters. ONRWs are subject not only to Tier 2 protection but also special protection under Tier 3 of the Antidegradation Policy.
  - b. Under Tier 3, the State cannot allow any degradation of the existing water quality necessary to protect and maintain ONRWs. There shall be no new or increased discharge to ONRWs or to tributaries to ONRWs that would result in lower water quality in the ONRW.
  - c. The State may allow some limited activities that result in temporary and short-term changes in the water quality of an ONRW. Such activities must not permanently degrade water quality or result in water quality lower than that necessary to protect the existing uses in the ONRW. During any period of time when, after opportunity for public participation in the decision, the State allows temporary degradation, all practical means of minimizing such degradation shall be implemented.

## 1.28 Special Resource Protection Waters (SRPWs)

- A. The following list contains surface waters of the State which have been designated by the Department as SRPWs. RIDEM objectively established a list of SRPWs. This list of designated SRPWs includes the waterbody name, location and water quality classification for each SRPW. Additional information on SRPWs is available from RIDEM.
- B. Special Resource Protection Waters (SRPWs) are high quality surface waters identified by the Director as having significant ecological or recreational uses, which may include but are not limited to: wildlife refuge or management areas; public drinking water supplies; State and Federal parks; State and Federal designated Estuarine Sanctuary Areas; waterbodies containing critical habitats, which may include but are not limited to waterbodies identified by the RIDEM Natural Heritage Program as critical habitat for rare or endangered species; wetland types or specific wetlands listed as rare, threatened, endangered, of special interest or of special concern by the RI Natural Heritage Program; waterbodies identified by the U.S. Department of the Interior on the Final List of Rivers for potential inclusion in the National Wild and Scenic Rivers System.

## B. Table of Special Resource Protection Waters

|                           |                             |                     |                        |            | SRP        | W Ca               | itego      | ries         |                      |                        |  |                               |               |                       |                   |

## 1.29 Rhode Island Site Specific Aquatic Life Water Quality Criteria Development Procedure

- A. Introduction There is valid scientific rationale for the contention that the National criteria derived using the November 28, 1980 National guidelines, 45 FR 79341, may be underprotective or overprotective at specific sites. National water quality criteria proposed under Section 304(a) (33 U.S.C. § 1314) or Section 307(a)(1) (33 U.S.C. § 1317) toxic pollutants are based on laboratory toxicity tests in which aquatic organisms were exposed to known concentration of toxicants in laboratory water and, thus, may not adequately represent site water and effluent effects. The underlying intent of adopting water quality criteria into the State's standards is to establish a set of conditions which, if consistently achieved, will not impair the biological integrity of the aquatic community residing in the waterbody.
- B. A prominent aspect of the National criteria is a provision allowing for modification to reflect local environmental conditions. Incorporating site specific water quality criteria into discharge permits will still ensure that the aquatic community is adequately protected from the effects of toxic pollutant discharges, while considering the mitigation of toxicity due to characteristics of a local waterbody and effluent. The need to reevaluate the National criteria and develop site specific criteria can emerge from many factors including:
  - 1. High natural ambient concentrations relative to standards or criteria.
  - 2. The presence of substances for which water quality based effluent limits are below analytical detectability.
  - 3. The possibility of complex or synergistic interactions of chemicals within the effluent and/or site water.
  - 4. Observed beneficial or detrimental effects on the receiving water biota.
- C. RIDEM developed this site specific criteria procedure using a Mostly Sanitary Secondary Treatment Plant's (MSSTP) effluent and designated site water in 1990. Due to the uncertainties associated with the instream fate of pollutant loading after discharge, RIDEM will not allow for unchecked or maximum attenuation of toxicity by various physical/chemical parameters in every effluent. Using a MSSTP effluent will afford a consistent, predictable baseline behavior of specific pollutants when attenuated by standard sanitary, secondary effluent components (TSS, alkalinity, pH etc.) This procedure will allow for a moderate amount of attenuation of toxicity by a discharge and site water while addressing the concern of instream fate of pollutant loadings. Site specific criteria may also be developed using the procedures outlined in the EPA document entitled Interim Guidance on Determination and Use of Water-Effect Ratios for Metals (EPA-823-B-94-001). Since the EPA WER Guidance procedures allow for the evaluation of more site specific characteristics (which may attenuate toxicity) than the RIDEM

- policy, a more rigorous testing program may be required when following the EPA WER Guidance than that described herein.
- D. The new criteria developed will be applied only to sites where there are existing discharges and will be administered uniformly to disallow any significant fluctuations in toxicity that may occur due to inconsistencies in the influent component or overall treatment.
- E. Documentation of the factors that exist at a facility or within a basin, which necessitate site specific criteria development, shall be submitted to RIDEM. This documentation shall include:
  - 1. Any previous effluent or instream bioassay test results and/or evaluation of the impact of the discharge on the resident aquatic community.
  - 2. Characterization of existing water quality conditions at the site or within the basin.
  - 3. The parameters for which site specific criteria are to be developed should be listed with an explanation of why the National criteria for these parameters can not be met.
  - 4. An indication of what levels of the parameters of concern could be attained after institution of an aggressive pretreatment program and exploration of other municipal standard treatment controls.
- F. The municipal effluent and site water data generated from this procedure will be applied to industries as a baseline for permit derivation.
- G. The criteria developed from one site may be applied to additional sites, if it is demonstrated to the satisfaction of the Director that the hydrologic, ecological and physiographic conditions are consistent between the two sites.
- H. New permit limits will be developed in accordance with applicable federal and state regulations and laws, including antibacksliding and antidegradation prohibitions.
- Necessary modifications to all permits will be based on compliance bioassay monitoring results.
- J. Methodology The RIDEM site specific criteria testing protocol narrowly limits the degree to which mitigation of toxicity may be considered. The RIDEM policy allows that the criteria may be applicable to a number of discharges and site waters. However, the RIDEM protocol is expected to result in more stringent criteria compared to the criteria resulting from following the EPA WER Guidance. EPA's WER Guidance (EPA-823-B-94-001) should be consulted for further information concerning alternative testing and data analysis procedures.

- 1. The site specific criteria shall be developed using a Mostly Sanitary Secondary Treatment Plant's (MSSTP, as designated by RIDEM) effluent with site water. This MSSTP will be a standard secondary facility with little or no industrial input. An efficient Wastewater Treatment facility which handles primarily domestic flow will offer the situation of limited buffering of toxicity due to chemicals from industrial inputs and/or domestic organic loadings to the WWTF. This set of tests will represent a best case scenario which can be applied to almost all facilities in the State. Future routine toxicity test results shall be used to monitor continued compliance and may determine if more stringent or lenient permit limits and/or requirements are needed for all facilities.
- 2. The site should be defined on the basis of expected changes in the relevant parameters' biological availability and/or toxicity due to physical and chemical variability of the site water.
  - a. These changes in toxicity cannot result from components present in the effluent of an upstream discharge.
  - b. Due to the complexity of factors, RIDEM will be responsible for delineating sites.
  - c. It is expected that a site and site water will be defined on a basinwide level.
- 3. These bioassay tests shall be conducted in accordance with protocol listed in as specified in § 1.29 of this Part. Additional methods such as protocols listed in 40 C.F.R. § 136, incorporated above in § 1.3(A) of this Part, may be considered at the discretion of the Director
  - a. At a minimum, these tests shall consist of acute toxicity testing of 2 species including a fish (freshwater = fathead minnow, *Pimephales promelas*; marine = silversides, *Menidia* spp.) and an invertebrate (freshwater = *Ceriodaphnia* spp.; marine = shrimp, *Mysidopsis bahia*).
  - b. Effluent testing shall be conducted on a pre-chlorinated, 24 hour flow proportioned (samples collected hourly), composite effluent sample of the MSSTP. A 100% effluent sample shall be analyzed to determine the concentration(s) of the parameter(s) of concern.
- 4. Acute tests shall be run on the MSSTP effluent diluted with a designated site water (MSSTP mixture) at a ratio of 20 site water:1 effluent, because it represents 75% of the dilution factors established for discharges in Rhode Island.
  - a. The Director may approve a testing protocol which is based upon the actual ratio of effluent and site water which will result under the receiving water design flow specified in § 1.10(C) of this Part. In

- this case, the site specific criteria will only be applicable to the particular site evaluated.
- b. An acute screening test shall be conducted on the MSSTP mixture sample, by spiking with one toxicant of concern at concentrations high enough to determine a statistically valid LC50, which is <100%, for that toxicant relevant to each species being tested. Then at least five toxicant concentrations, spaced evenly above and below the previously determined LC50, and a control shall be tested.
  - (1) Two replicates per concentration are required and the number of organisms per replicate will depend on the species being tested.
- c. In the case of freshwater testing, the hardness of the site water must be monitored at the time the tests are conducted to allow for calculations of the criteria based on hardness.
- d. Each complete set of tests shall be conducted on three different occasions (dates).
  - (1) Chemical analyses, including hardness, of the site water and MSSTP effluent combined sample will have to be conducted to confirm the concentration of the spiked chemical on selected dilutions during each testing occasion.
- e. Selected dilutions shall include low, medium, and high concentrations on one replicate and one species.
  - (1) Chemical analyses of these dilutions shall be conducted on a portion of the sample taken immediately prior to the addition of the organisms.
- f. Dissolved metal analyses must be conducted if the results of the toxicity testing will be used to establish site specific criteria for dissolved metals.
- g. Similar tests shall be conducted on a control of laboratory water spiked with the toxicant of concern at concentrations not only equivalent to those observed in the effluent, but also which will allow for a statistical comparison with the National criteria.
- h. Using the data from both sets of replicates, the LC50, standard deviation, and 95% confidence intervals shall be obtained for each species tested in the laboratory water, relative to each toxicant of concern, for each of the three testing occasions. The laboratory water LC50 test results shall be compared to the National acute

- LC50 values obtained for each testing occasion to confirm the validity of these site specific tests.
- Using the data from both sets of replicates, the LC50, standard deviation, and 95% confidence intervals shall be obtained for each species tested in the MSSTP mixture, relative to each toxicant of concern for each of the valid testing occasions.
- j. Species-specific water effect ratio shall be calculated for each of the valid testing occasions by dividing the laboratory water LC50 into the MSSTP mixture LC50.
- k. Two species-specific final WER shall be calculated as the geometric mean of the valid WERs (from each species).
  - (1) These two specific WERs shall be compared to see if they are significantly different (p < 0.05). If these two speciesspecific WERs are not different, then the final site specific WER is the geometric mean of these two WERs. If the two species-specific water effect ratios are statistically different, then the WER from the most sensitive species shall be the final site specific WER.
- If the final site specific WER is not significantly different from a value of one (1.0), then the National Acute Criteria is the Site Specific acute criteria. If the final site specific WER is significantly different from a value of one (1.0), then the Site Specific Criteria shall be calculated by multiplying the final site specific WER times the National freshwater acute criteria formula or the National saltwater acute criteria, as appropriate.
- m. The Director may determine not to use all of the valid testing occasions to calculate the final site specific WER if necessary to protect aquatic life.
- 5. If a National acute/chronic ratio was used to develop the National chronic criteria for the chemical of interest, the site specific chronic criteria is calculated by multiplying the site specific acute criteria by 2 and then dividing by the National acute/chronic ratio.
- 6. If the National acute/chronic ratio for the toxicant of concern does not exist, a site specific chronic criteria can also be obtained by testing species for chronic toxicity. Tests shall be conducted using the same species requirements within §§ 1.29(I)(3)(a) and 1.27(I)(4) of this Part.
  - a. The Director may approve a testing protocol which is based upon the actual ratio of effluent and site water which will result under the receiving water design flow specified in § 1.10(C) of this Part. In

- this case the site specific criteria will only be applicable to the particular site evaluated.
- b. The chronic tests shall be conducted in accordance with protocol listed in 40 C.F.R. § 136, incorporated above in § 1.3(A) of this Part, , incorporating any deviations from protocol listed below.
- c. A chronic screening test shall be conducted on the MSSTP and site dilution water mixture by spiking with one toxicant of concern at concentrations high enough to determine a statistically valid chronic toxic effect value for that toxicant relevant to each species being tested. Then at least five toxicant concentrations, spaced evenly above and below the previously determined chronic toxic effect value, and a control, shall be tested.
  - (1) The number of replicates per concentration and the number of organisms per replicate will depend on the species being tested in accordance with the EPA protocol.
- d. Chronic testing will also follow the requirements listed in §§ 1.29(I)(4)(c) through (e) of this Part.
- e. Using the data from all sets of replicates, the No Observed Effect Concentration (NOEC), Lowest Observed Effect Concentration (LOEC), and Maximum Acceptable Toxicant Concentration (MATC) for each species tested in the lab water tests, relative to each toxicant of concern, for each of the three testing occasions. The results of the laboratory water test obtained for each testing occasion are compared with the National chronic value to determine the validity of these site specific tests.
- f. Using the data from all sets of replicates, the No Observed Effect Concentration (NOEC), Lowest Observed Effect Concentration (LOEC), and Maximum Acceptable Toxicant Concentration (MATC) shall be obtained for each species tested in the MSSTP effluent, relative to each toxicant of concern for each of the valid testing occasions.
- g. Species-specific water effect ratios shall be calculated for each of the valid occasions by dividing the chronic value from the laboratory water test into the chronic value from the MSSTP effluent test.
- h. Two species-specific final WERs shall be calculated as the geometric mean of the valid WERs (from each species).
  - (1) If the two species-specific WERs are not significantly different (confidence limits overlap), then the final site specific WER is the geometric mean of these two WERs. If the two species-specific final WERs are significantly different

from each other, then the WER from the most sensitive species shall be the final site specific WER.

- i. If the final site specific WER is not significantly different from a value of one (1.0), then the National chronic criteria equals the site specific chronic criteria. If the final site specific WER is significantly different from a value of one (1.0), the site specific Chronic Criteria can be calculated by multiplying the final site specific WER by the National Freshwater Chronic Criteria Formula or the National Saltwater Chronic Criteria, as appropriate.
- j. The Director may determine not to use all of the valid testing occasions to calculate the final site specific WER if necessary to protect aquatic life.

## K. Permit Limits and Requirements

- The information obtained from the three testing occasions will be reviewed by RIDEM to determine the Final Site Specific criteria for each parameter evaluated.
- 2. If the results from these test procedures do not change the National criteria, the National criteria would apply to all dischargers on the waterbody and would be used to derive permit limits where necessary. Chemical specific limits will be developed for those pollutants which would cause an excursion above the National criteria and will be incorporated into permits on a case-by-case basis.
  - a. Dischargers would be required to redesign their facility, if necessary, to ensure compliance with the National criteria and permit limits. Bioassay monitoring requirements and whole effluent toxicity (WET) limits may be developed and incorporate into permits, as necessary, based on previous bioassay test results, continual toxicity during compliance monitoring and new data from dilution studies.
- 3. If the results from these test procedures justify changing the National criterion to a site specific criterion, these new ambient criteria would apply to all dischargers on within the designated site and would be used to derive permit limits.
  - a. For freshwaters, the site specific criteria will be established by multiplying the National criteria, determined at the hardness anticipated during the design receiving water flow, by the final water effect ratio(s).
  - These permits may include chemical specific limits and/or whole effluent toxicity limits. Whole effluent toxicity limits and specifics of bioassay monitoring requirements will be based on previous

bioassay test results, continual toxicity during compliance monitoring and new data from dilution studies.

- 4. If toxicity testing is incorporated into a permit,
  - a. Facilities with 20:1, or less dilution may be required to conduct chronic toxicity tests.
  - b. Facilities with a 20.1-100:1 dilution may be required to conduct acute tests.
  - c. Facilities with greater than 100:1 dilution may also be required to conduct acute toxicity tests.
  - d. WET limits may be developed based on EPA's acute and/or chronic Toxic Units Method although meeting a minimum LC50 may be required if best professional judgement deems it is necessary.
  - e. Toxicity Identification Evaluations (TIE) and Toxicity Reduction Evaluations (TRE) may be required of any discharger if bioassay compliance monitoring indicates continual toxicity.
  - f. Bioassessment studies may be required to ensure the integrity of the instream aquatic community.
